STG-Beikirch – modular system solutions for air and safety

Natural Ventilation

Natural aeration and ventilation

With natural ventilation systems from STG-Beikirch, energy-efficient, demand-oriented flat roof and façade solutions for a pleasant room climate with a high proportion of fresh air can be realised. Thanks to a modular modular product system of drives and controls, they can be flexibly adapted to all requirements in new construction and renovation - including integration into the building management system.

Smoke Management Systems

Smoke extraction systems

Natural smoke and heat ventilation systems and smoke extraction systems from STG-Beikirch ensure the safety of escape and rescue routes in the event of fire and guarantee the protection of persons, property and real estate. The system portfolio is certified according to current standards, regulations and requirements.

Building Automation

Building automation

Building automation includes all equipment for automatic control and regulation as well as monitoring, optimization and operation of the technical building equipment. With solutions from STG-Beikirch, the basis is laid for the simple integration of the components of the building envelope into the building management system. Based on a modular system, individual system solutions for control and regulation technology are designed and implemented.

STG-Beikirch is part of the Light + Air division of the Kingspan Group and is one of Europe's leading manufacturers of smoke protection pressure systems (SPS), smoke and heat extraction systems (SHEVS) and controlled natural ventilation systems. Based in Ireland, the Kingspan Group employs over 14,000 people worldwide and is a leader in sustainable building products such as high-performance insulation and building envelope systems.

Our vision:

Become the GLOBAL LEADER in ENERGY EFFICIENT, sustainable LIGHTING, natural VENTILATION and smoke management solutions for the roof and façade non-residential sector.

Table of contents

Our products – ranging from intelligent drive technology to individually programmable ventilation and SHE control panels to solutions for integration into central building management systems – meet the highest standards of safety, efficiency and quality.

This Planning File offers a detailed overview of our complete portfolio of drives, control panels, accessories and safety components. To help you find the perfect solution for your application requirements – quickly and reliably.

About us; contact details

Kingspan + STG-Beikirch:

Strong partners. Strong brands. Strong portfolio.

STG-Beikirch GmbH & Co. KG is one of Europe's leading manufacturers of ventilation and natural smoke and heat extraction products and system solutions for industrial, commercial and administrative buildings.

Kingspan is the world's leading supplier of roof and wall insulation products and building envelope systems.

Core competencies and expertise have been pooled in the newly established "Kingspan Light + Air" business unit to focus even more closely on an integrated approach to designing complex system solutions to lighting, ventilation, safety and energy efficiency challenges to create smart building envelopes.

The value chain is, moreover, unique in the marketplace, spanning engineering, production, installation and service. Our activities always focus on energy efficiency – to ensure sustainable and safe construction with maximum value added for our customers.

In this section, you will find:

- Information about the company
- Information about who you can contact

System solutions for Natural Ventilation and Smoke and Heat Extraction – smart and safe

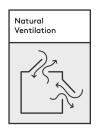

The building envelope forms part of the building management system and therefore influences the safety of people and equipment, the energy performance of a building and the productivity of the people who work in it. Securing the escape and rescue routes is a key factor.

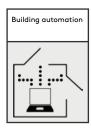

Together with our new shareholder Kingspan, we can offer a unique modular system of components for the entire building envelope.

• Our products – ranging from intelligent drive technology to individually programmable ventilation and SHE control panels to solutions for integration into central building management systems – meet the highest standards of safety, efficiency and quality.

Leading experts for more than 30 years

For more than 30 years, STG-Beikirch GmbH & Co. KG has been developing standardised and project-specific façade automation solutions and ranks among Europe's leading manufacturings of smoke pressure systems (SPS), smoke and heat extraction (SHE) and controlled natural ventilation systems.

The technology behind our servo-powered window drives, contactless finger protection, SPS and SHE systems enhances convenience and safety in industrial, commercial and administrative buildings around the world. We also play a valuable role in optimising capital expenditure and operating costs.

Take advantage of our expertise and the competence we have developed from projects of all sizes, from working closely with specialist testing agencies and engineering firms, and from our active involvement in various associations and working groups focusing on customised modular fire protection and ventilation solutions from a single source.

We provide a broad range of products, technologies and services from our production facility in Lemgo. Our portfolio encompasses the design, planning, execution and servicing of ventilation equipment and smoke and heat extraction systems, together with their system components. The Industrial Electronics business unit of STG-Beikirch manufactures electronic components for in-house and third-party production use.

Since October 2016, STG-Beikirch has been part of the new "Light & Air" division of Kingspan.

Kingspan Group

Founded in the late 1960s, Kingspan is meanwhile listed on the stock exchange and ranks among the global leaders in the field of sustainable high-performance building insulation products, building envelope systems and solar-integrated building envelopes.

The product portfolio includes daylight systems, insulated roof and wall elements, as well as panels for sectional doors, complete with accessories. The company is acknowledged throughout the entire building industry for its outstanding innovation, design, quality and engineering expertise.

As part of its business strategy to develop products and system solutions to continuously improve energy efficiency and fire protection, Kingspan formed a new global division – "Kingspan Light & Air". This business unit brings together all the core competencies surrounding sustainable lighting, natural ventilation and smoke management solutions for flat roofs and commercial building façades. As one of the leading manufacturers and providers of ventilation and safety solutions in the European façade market, STG-Beikirch is one of the key members of the Kingspan Light & Air division.

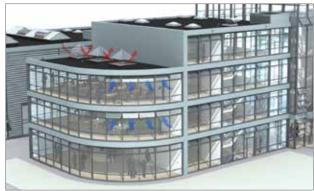

For more information about Kingspan, please visit www.kingspan.com

Window Automation

For automated building envelopes - smart and energy efficient

90% of all fire casualties are smoke victims ...

The danger of a fire lies not in the fire itself, but more in the smoke it causes. Smoke and the ensuing toxic fumes spread, restrict visibility and block escape routes. The toxins cause smoke poisoning.

Ensuring quick expulsion of the smoke - which can form in enormous quantities in a short space of time is crucial. This task is performed by smoke and heat extraction (SHE) systems.

Buildings that are not equipped with SHE are completely enveloped in fumes within just a few minutes. Any attempt at rescue is rendered impossible by this layer of fumes!

Smoke and heat extraction (SHE) systems: Natural lift extracts smoke

SHE systems are crucial to save lives and property. A smoke and heat extraction system keeps smoke levels down in the evacuation routes and extracts the smoke reliably out of a building. A system that -in the event of a fire - can save lives, protect property and support rapid evacuation.

Smoke pressure (SPS) systems: Overpressure keeps out smoke

Smoke pressure systems keep indoor corridors free of smoke. In the event of fire, smoke extraction and fresh air flaps open and flush the toxic smoke out of the indoor safety staircase. Continuous overpressure ensures that toxic smoke and fumes cannot escape from other areas into escape and evacuation routes. Unlike SHE systems, SP systems are specially designed for use in high buildings or indoor building sections.

Controlled natural ventilation: Thermal lift aerates and ventilates

The importance of controlled natural ventilation in buildings is growing.

Modern architecture with its large glass façades and technical progress with increasingly improved insulation are preventing the exchange of air.

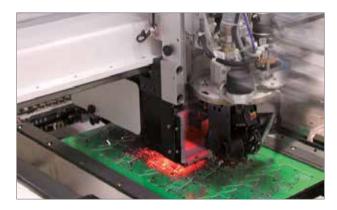

Controlling the opening of windows leverages natural wind and thermal powers:

- Ensures the necessary exchange of air
- Naturally air conditions the building
- Eliminates excess heat by cooling down at night
- Creates a healthy climate and friendly atmosphere

Industrial Electronics

From planning through to production

Your partner for industrial electronics

We support your products throughout their entire life cycle: From layout to tested circuit board, from development and design consulting to supply chain management including procurement of the components and circuit boards, multi-technology assembly, testing and packaging, to international delivery logistics and comprehensive after-sales service.

STG-Beikirch develops and manufactures electronic assemblies and equipment for both its own and customer-specific products. Our activities span the entire field of industrial electronics. Our diverse electronic integration portfolio encompasses assembly development, materials management and production, and even complete assembly of your customised housing.

Production facilities that incorporate best engineering practice

SMD production equipment, our EMC measuring booth for testing electronic control panels, our electronic assembly and our EN ISO 9001 and EN ISO 14001 certifications all testify to our success and competence as am EMS service provider. We can manufacture your electronic assemblies using cutting-edge systems equipped with both conventional and SMD technology. Comprehensive testing using in-circuit and functional testers is a standard feature of the services we offer.

- Services portfolio: Development support, hardware/software development, complete product design, materials management, prototypes/small series, series production, test design/assembly tests, building/final testing of devices, after-sales service/repairs
- Sectors: Industry, medical technology, communications/network technology, lighting technology, consumer energy technology, building technology, light management, light control, performance control
- Manufacturing competencies: SMD, THT, manual assembly, varnishing, spot soldering, AOI inspection, hardware and software development, device assembly and materials procurement
- **Competencies:** Power electronics, mechanics

Research, development and project delivery are just as much a part of our main business focus as the sale of electronic control panels, drives and electrical SHE and ventilation systems.

Training Programmes

Expand your expertise.

Smoke and heat extraction systems rank among the key technical fire protection components in a building. A thorough technical understanding of these systems is crucial. We therefore offer comprehensive training programmes and seminars – including our SHE experts training course, SHE refresher courses and MZ3 product training sessions.

As part of our training programmes, you will be given information about the performance requirements and protective aims of SHE systems and about current statutory norms and guidelines, as well as a practically-oriented overview of the latest equipment and systems technology, and control systems made by STG-Beikirch.

Our training programmes and seminars give you the best possible qualification and ensure you are always up to date with regard to best engineering practice, enabling you to optimise your standard-compliant and technical performance of commissioning, maintenance and repair works.

All training programmes are available in different formats:

- In-house training at our training centre in Lemgo: Apart from learning the technical knowledge, you can also see the products themselves close up.
- On-site training allows you to learn quickly without having to travel. Content can be tailored to your individual requirements. Feel free to ask for more details.
- >>> For detailed information about our training programmes, please visit www.stg-beikirch.de/schulungen-seminare.html

1 Drives

We manufacture all our drives ourselves and can therefore guarantee outstanding quality. We also manufacture all the chains for our drives from high-quality stainless steel.

The consistent modularity of our products – regardless of whether for smoke extraction or natural aeration and ventilation through windows, flaps, louvres or skylight domes – enables us to manufacture a wide range of different drive variants to ensure we can offer the right solution for any project.

Our portfolio

- Linear drives ranging from 500–2000 N
- Accessories for linear drives e.g. hinge and standard brackets
- Chain drives ranging from 200-700 N
- Accessories for chain drives
- EasyDrive software and signal contacts
- Electrical locking mechanisms
- Accessories for electrical locking mechanisms e.g. tappets and sequential controllers

SYSTEM BENEFITS:

- In-house production of chain, linear and locking drives
- Ideal for reliable smoke extraction and natural aeration and ventilation
- Numerous drives with innovative EasyDrive/2 technology

- Choice of drives with different power levels
- Small and large opening widths
- Special designs for integration in a profile

Guide to selecting 24 V DC and 230 V AC linear and chain drives

■ **Note:** The diagrams offer an overview of motor performance.

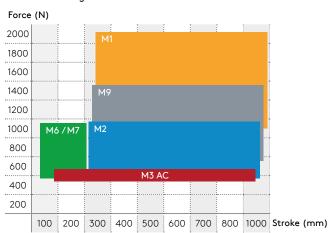

As opening widths increase, the pressing forces of chain drives may decrease.

Please refer to the load-displacement diagrams in Section 4.

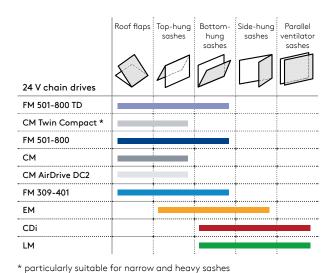

Preferred applications for 24 V/230 V linear drives

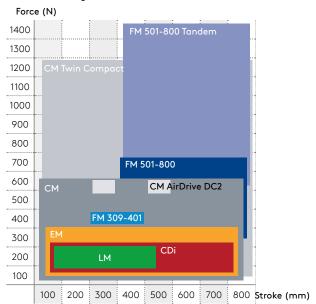

Performance range: 24 V/230 V linear drives

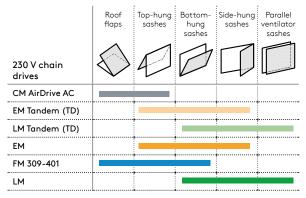

Preferred applications for 24 V chain drives

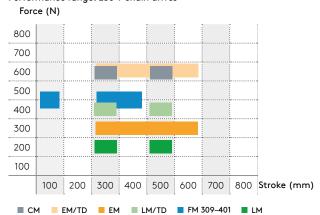

Performance range: 24 V chain drives

Preferred applications for 230 V chain drives

Performance range: 230 V chain drives

1.1 Linear drives

Our 24 V DC linear drives for SHE and daily ventilation are particularly powerful drive systems fitted with a push spindle to open and close larger sashes, flaps and skylight domes.

Drives are available for the widest range of window types and sizes, with up to 2000 N power and opening widths up to 1000 mm. An additional synchronous module ensures the exact synchronisation of linear drives on a single window.

Our 230 V AC drives are available up to 1000 N and with opening widths up to 750 mm.

Performance range: 24 V/230 V linear drives

1.1.1.1 M2 24 V linear drive

Opens and closes window casements, roof windows and skylight domes for smoke and heat extraction and daily ventilation

Universal linear drive for providing ventilation and extracting smoke, for use on window casements, roof flaps, skylight domes and continuous rooflights.

Benefits/ Features

- Different pressing forces available (500 N and 1000 N)
- Automatic switch off when end position is reached
- Optional synchronous modules for synchronous operation of multiple drives
- Maintenance-free due to permanent lubrication
- Dust-tight and splashproof (protection category IP 54)
- Non-corrosive aluminium housing and thrust tube

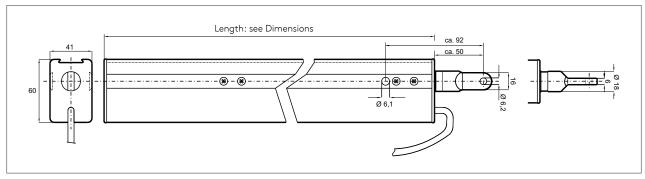

Applications

- Skylights or roof flaps
- Vertical façades, e.g. top-hung windows
- Skylight domes

Material

- Housing: Aluminium
- End caps: Black plastic
- Colour: EV1/anodised silver or RAL on request

1.1.1.2 M6 24 V linear drive

Opens and closes façade windows to a wide angle to extract smoke and provide ventilation

Linear drive for use in bottom-hung sashes and louvre windows, skylight domes, continuous rooflights or skylights.

Benefits/ Features

- Different pressing forces available (500 N and 1000 N)
- Integrated electronic max. load cutoff
- Opening angle up to 90°
- Dust-tight and splashproof (protection category IP 54)
- Can be combined with additional locking mechanism using ESF sequential control, see Section 1.3.4
- Parallel operation on large casements using external ESFT tandem control, see Section 1.3.4

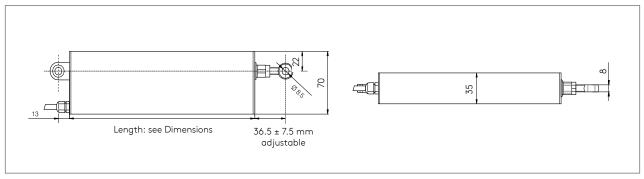

Applications

- Skylights or roof flaps
- Vertical façades, e.g. top-hung windows, side-hung sashes
- Preferably for low casements, bottom-hung windows that open inwards
- Skylight domes

Material

1.1.1.4 M9 and M9 Water Resistant (WR) 24 V linear drive

Opens and closes window casements, skylight domes and roof windows to extract smoke and provide ventilation

Universal linear drive for providing ventilation and extracting smoke, for use on window casements, roof flaps, skylight domes and continuous rooflights. Optional water resistant (WR) type.

Benefits/ Features

- Different pressing forces available (650 N, 1000 N and 1500 N)
- Integrated electronic max. load cutoff
- Optional synchronous modules for synchronous operation of multiple drives
- Dust-tight and splashproof (protection category IP 54)
- Non-corrosive aluminium housing and thrust tube
- Optional water resistant (WR) type specially designed for moist environments
- \blacksquare Installation position of WR type: Do not tilt upper push rod by more than 45°

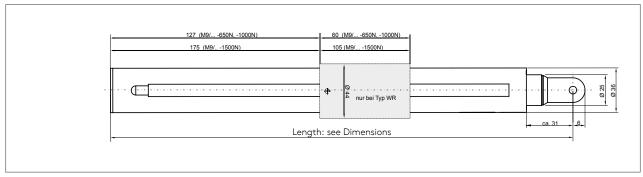

Applications

- Skylights or roof flaps
- Vertical façades, e.g. top-hung or side-hung windows
- Skylight domes, continuous rooflights

Material

- Housing: Aluminium
- End caps: Aluminium

1.1.1.5 M1 24 V linear drive

Opens and closes window casements, skylight domes and roof windows to extract smoke and provide ventilation

Linear drive for use on heavy skylight domes, continuous rooflights, roof flaps and skylights. Suitable for ventilation and smoke and heat extraction.

Benefits/ Features

- Different pressing forces available (1000 N, 1500 N and 2000 N)
- Integrated electronic max. load cutoff
- Optional synchronous modules for synchronous operation of multiple drives
- Fast running speed
- Dust-tight and splashproof (protection category IP 54)
- Non-corrosive aluminium housing and thrust tube

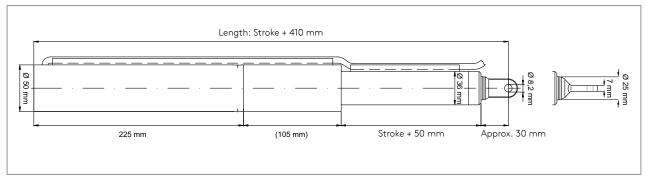

Applications

- Skylights or roof flaps
- Vertical façades, e.g. top-hung windows
- Skylight domes and continuous rooflights

Material

- Housing: Aluminium
- Colour: EV1/anodised silver or RAL on request

1.1.2 M3 230 V linear drive

Provides ventilation in window casements, roof flaps and skylight domes

Linear drive for ventilating roof flaps and skylights, skylight domes and continuous rooflights. M3 runs on 230 V mains voltage and therefore does not require a ballast.

Benefits/ Features

- Compact drive in rectangular aluminium profile without interfering attachments
- Tight closing without limit switch adjustment with integrated electronic load cutoff, therefore always tight closing of window flaps, no limit switch adjustment required
- Dust-tight and splashproof (protection category IP 54)
- Non-corrosive aluminium housing and thrust tube
- Potential-free contact for "not closed" message (contact closes when leaving closed position)

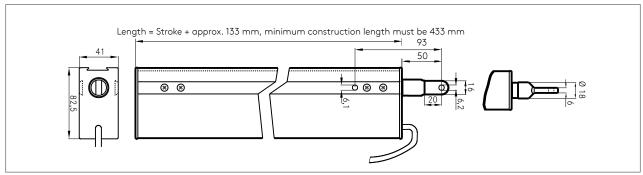

Applications

- Skylights or roof flaps
- Vertical façades, e.g. top-hung windows
- Skylight domes and continuous rooflights

Material

- Housing: Rectangular aluminium profile
- End caps: Grey plastic
- Colour: EV1/anodised silver or RAL on request

Floatrical proporties

1.1.3 Linear Drive Accessories

The range of window profiles and opening types is extensive.

To ensure proper installation, we offer numerous conventional, angle and hinge brackets – all of which are perfectly tailored to the specific window system and drives in question.

Our portfolio

- Hinge brackets
- Brackets
- Angle brackets
- Miscellaneous accessories
- Synchro module
- WPS/2

1.1.3.1 Hinge Brackets for linear drives

FB9/A hinge bracket

For M2, M3, M6, M7, M9.

- Incl. locking pin and spring clip
- Material: Die-cast zinc
- Locking pin: 6 mm diameter
- Eyebolt drill hole: 6.2 mm diameter
- Max. permissible force: 1000 N

Order information						
FB9/A						
Item number	20301001					

FB9/C hinge bracket

For M1, M2, M6, M7, M9.

- Material: Galvanised steel
- Locking pin: 8 mm diameter
- Base bolt/eyebolt drill hole: 8.2 mm diameter
- Max. permissible force: 1000 N

Order information					
FBS	P/C				
Item number	65609020				

FB9/G hinge bracket

For M2 500 N, M3, M9.

- Special version for skylight domes
- Material: Galvanised steel
- Locking pin: 6 mm diameter
- Eyebolt drill hole: 6.2 mm diameter
- Max. permissible force: 650 N

Order information					
FB9/G					
ltem number	65609000				

FB9/H hinge bracket

For M2, M3, M6, M7, M9.

- Like FB9/A but with releasable lateral pin for ventilation systems
- Material: Galvanised steel
- Locking pin: 6 mm diameter
- Eyebolt drill hole: 6.2 mm diameter
- Max. permissible force: 1000 N

Order information					
FB9	7/H				
Item number	20301018				

FB9/J hinge bracket

For M1, M2, M3, M6, M7, M9.

Material: Steel

Locking pin: 8 mm diameter

Eyebolt drill hole: 8.2 mm diameter Max. permissible force: 1500 N

Order information						
FB9/J						
ltem number	65609040					

FB11/C hinge bracket

For M1, M9.

- Suitable also for narrow frames, maximum load-bearing capacity and good corrosion protection
- Material: Galvanised steel
- Locking pin: 8 mm diameter
- Base bolt/eyebolt drill hole: 8.2 mm diameter
- Max. permissible force: 3000 N

Order information					
FB11/C					
ltem number	65609021				

1.1.3.2 Brackets for linear drives

K26/B sliding bottom-hung bracket Fur M2 and M3.

- For mounting the narrow side of the drive onto window frames, skylight domes, etc.
- Installation in the bottom clamp guide
- Material: Aluminium, stainless steel
- Max. permissible force: 650 N

Order information						
K26/B						
ltem number	27000581					

K26/B/XL sliding bottom-hung bracket Fur M2 and M3.

- For mounting the narrow side of the drive onto window frames, skylight domes, etc.
- Installation in the bottom clamp guide
- Material: Aluminium, stainless steel
- Max. permissible force: 1000 N

Order information						
K26/B/XL						
Item number	65502600					

K27/B sliding bottom-hung bracket Fur M2 and M3.

- Height-adjustable bracket for mounting the narrow side of the drive onto window frames, skylight domes, etc.
- Preferably used on slanted skylight dome bases
- Installation in the bottom clamp guide
- Material: Aluminium, stainless steel
- Max. permissible force: 650 N

Order information					
K27/B					
ltem number	27000580				

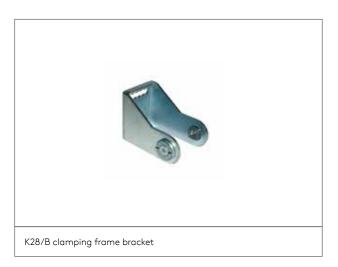

K27/B/XL sliding bottom-hung bracket

Fur M2 and M3.

- Height-adjustable bracket for mounting the narrow side of the drive onto window frames, skylight domes, etc.
- Installation in the bottom clamp guide
- Material: Galvanised steel, aluminium, stainless steel
- Max. permissible force: 1000 N

Order information						
K27/B/XL						
ltem number	27000582					

K28/B clamping frame bracket

Fur M2 and M3.

- For universal application
- Complete with two special clamping screws for the lateral clamp guides
- Specially large contact surface for mounting on the frame
- Material: Galvanised steel
- Max. permissible force: 650 N
- Note: Please select the right bracket for the type of drive.

Order information						
	K28/B1	K28/B2	K28/B3			
Item number	65502800	65502802	65502805			
M2 500 N (standard or RAL)	×	-	-			
M3 (standard)	-	х	-			
M3 (varnished in RAL)	=		х			

K29/B clamping frame bracket

Fur M2 and M3.

- Like K28/B but offset and available with two installation heights
- Material: Powder-coated steel
- Max. permissible force: 650 N
- Note: Please select the right bracket for the type of drive.

Order information			
	K29/B1	K29/B2	K29/B3
Item number	65502900	65502902	65502905
M2 500 N (standard or RAL)	×	-	-
M3 (standard)	-	х	-
M3 (varnished in RAL)	=		х

1.1.3.2 Brackets

K31 bracket with threaded pin

For M2 and M3.

- For top- and bottom-hung windows, roof flaps and skylight domes
- With drill hole and threaded pin
- Material: Galvanised steel
- Max. permissible force: 650 N

Order information		
K31		
ltem number	65000013	

K9/O clamping frame bracket

For M9 and M1.

- The mounting bracket and clamping ring can be slid virtually over the entire drive and is suitable for all widespread profile systems for roof and façade windows
- Material: Die-cast aluminiumMax. permissible force: 1000 N

Order information		
K9/O		
ltem number	65500150	

K9/C clamping frame bracket

For M9.

- Mounting bracket with clamping ring, suitable for universal installation
- Specially suited for wide-spaced installation on windows and skylight domes
- Material:

Bracket: Steel; Clamping ring: Die-cast aluminium

Max. permissible force: 650 N

Order information		
К9/С		
Item number	65500030	

K9/K mounting bracket for K9/O For M9.

- In conjunction with K9/O e.g., for inward-opening bottom-hung windows.
- Important: The motor suspension must be spaced at least 100 mm apart from the casement.
- Material: Galvanised steel
- Max. permissible force: 650 N

Order information		
K9/K		
ltem number	65500110	

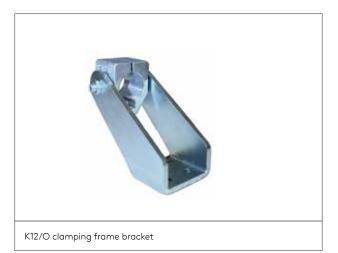

K10/O clamping frame bracket

For M9 and M1.

- Specially for drives with more than 1500 N and other drives with 36 mm tube diameter.
- Split fork bracket for easy installation/adjustment.
- Can be slid virtually over the entire drive.
- Suitable for all profile systems on roof and façade windows.
- Material: Bracket: Steel;Clamping ring: Die-cast aluminium
- Max. permissible force: 2000 N

Order information		
K10/O		
ltem number	13365501100	

K12/O clamping frame bracket

For M9 and M1.

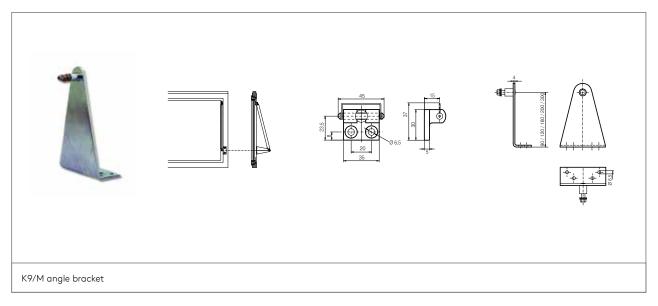

- Sturdy bracket for high-performance drives with 36 mm tube diameter.
- Can be slid virtually over the entire drive.
- Suitable for all profile systems on roof and façade windows.
- Most applications do not require an additional fastening bracket.
- Material: Steel, aluminium
- Max. permissible force: 1500 N
- Note: Optional profile reinforcement can be ordered under item number 13342503135.

Order information		
K12/O		
ltem number	13342503140	

1.1.3.3 Angle brackets for linear drives

K9/M angle bracket

For M6 500 N, M7 500 N and M9 650 N.

- For inward- or outward-opening top-, bottom- and side-hung windows
- Min. space required between casement and soffit: 45 mm
- Locking pin for hinge bracket: 6 mm diameter
- Fastening bolt for angle bracket: 8 mm diameter
- Drill hole needed for eyebolt: 6.2 mm diameter
- Drill hole needed for base bolt: 8.2 mm diameter
- Material: Galvanised steel
- Max. permissible force: 650 N

Attention:

Angle brackets must be installed above the centre of the window – measured from the hinge side. Please order suitable drives for the relevant casement size separately.

Note:

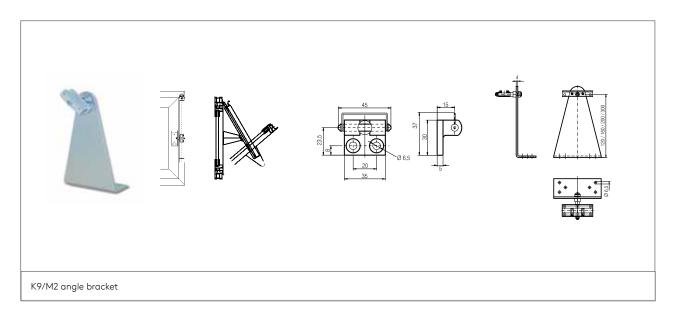

Only for use with drives with base bolt.

Please order the following parts: FB9/A hinge bracket and angle bracket.

Hinge bracket		
FB9/A		
ltem number	20301001	

Angle bracket		
K9/M		
Version	Item number	
20	65500130	
160	65500134	
200	65500135	
300	65500136	

K9/M2 angle bracket

For M2 500 N and M3.

- For inward- or outward-opening bottom- and side-hung windows
- Min. space required between casement and soffit: 48 mm
- Locking pin: 6 mm diameter
- Eyebolt drill hole: 6.2 mm diameter
- Material: Galvanised steel Max. permissible force: 500 N

Attention:

Do not mount the angle bracket below half-height of the window.

Please order suitable drives for the relevant casement size separately.

Please order the following parts: FB9/A hinge bracket and angle bracket.

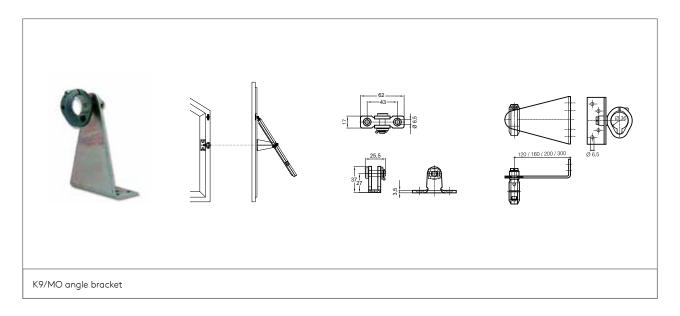

Hinge bracket		
FB9/A		
Item number	20301001	

Angle bracket		
K9/M2		
Version	Item number	
120	65500156	
160	65500157	
200	65500158	
300	65500159	

1.1.3.3 Angle brackets

K9/MO angle clamping ring bracket

For M9 650 N.

- Clamping ring installation for top-, bottom- and side-hung windows in a façade, with a required opening angle up to about 60°
- Min. space required between casement and soffit: 56 mm
- Locking pin for hinge bracket: 8 mm diameter
- Eyebolt drill hole: 8.2 mm diameter
- Material: Galvanised steel
- Max. permissible force: 650 N

Attention:

Angle brackets must be installed above the centre of the window – measured from the hinge side.

Please order suitable drives for the relevant casement size separately.

Note:

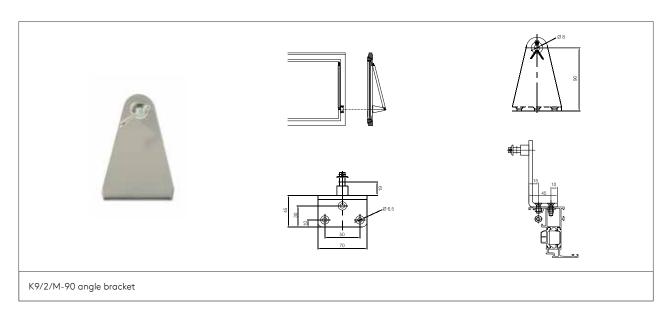

Only for use with drives with base bolt.

Please order the following parts: FB9/C hinge bracket and angle bracket.

Hinge bracket				
FB9/C				
ltem number 65609020				

Angle bracket				
K9/MO				
Version	Item number			
120	65500160			
160	65500161			
200	65500162			
300	65500163			

K9/2/M-90 angle bracket

For M6, M7 and M9 $^{1)}$.

- For mounting linear drives with base bolt on the side of top- or bottom-hung windows
- Min. space required between casement and soffit: 40 mm
- Fastening bolt for angle bracket: 8 mm diameter
- Material: Steel
- Max. permissible force: 1000 N

Attention:

Angle brackets must be installed above the centre of the window - measured from the hinge side.

Note:

Only for use with drives with base bolt.

Please order the following parts: FB9/A or FB9/C hinge bracket and angle bracket.

Hinge bracket				
FB9/A				
ltem number 20301001				

Hinge bracket				
FB9/C				
Item number	65609020			

Angle bracket				
K9/2/M				
Version Item numb				
90	27000637			

¹⁾ Please order drive with 8.2 mm drill hole for eyebolt.

1.1.3.4 Miscellaneous accessories for linear drives

K9/L base bolt

For M9.

- For installation with FB9/C hinge bracket, e.g. for louvre designs with linear drives and "eye-eye" fastening
- **Note:** Option, mounted on the drive, cannot be retrofitted. Please order together with the drive.

Order information				
K9/L				
ltem number	65500120			

PA9 position indicator

For M9 and M1.

- Magnetically activated contact. In the cable duct, incl. solenoid switch
- Can be mounted anywhere along the entire lift of the drive
- Multiple PA9 can be used
- Note: Option, mounted on the drive, cannot be retrofitted. Please order together with the drive.

Order information			
PA9			
ltem number	6600000		

SR90-A adjustable ring for shortening stroke For M9 (up to 650 N).

- For precise specification of the travel path (at the point of installation), e.g. in conjunction with hold-open arms, louvre windows, shutters
- Material: Aluminium, anodised silver (EV1)
- Max. permissible force: 650 N

Order information			
SR90-A			
Item number	96011360		

1.1.3.5 SM3 synchronous module

For operating two drives on one window or roof flap

SM3 synchronous module is a microprocessor-controlled synchronisation and cutoff controller for simultaneously activating two 24 V DC smoke extraction and/or ventilation drives on one opening element (casement/dome, etc.). The synchronous module version is dictated by the application and current consumption of the drives.

Benefits/ **Features**

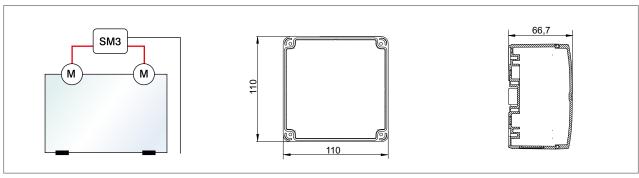

- For operating two drives with signal generators, without limit switches and without integrated load cutoff
- Safe operation in conjunction with up to 1000 mm lifts, regardless of the drive running times or the window/roof flap material
- Up to 10 m permissible cable length between SM3 and drives
- Integrated stopping times in "Close" direction to eliminate potential differences in running time
- Factory-preset cutoff thresholds when raising and lowering
- Service port interface for additional configuration options
- Configurable alert contact

Applications

For operating two drives with signal generators, without limit switches and without integrated load cutoff

- Unit properties If load-related differences occur, they are automatically eliminated and exact synchronisation assured
 - The integrated current-dependent overload cutoff mechanism shuts the drives down at the end points and (if overload occurs) interim points
 - Upon reaching the end position, the synchronous module locks to prevent multiple activation in the same direction, and can only be controlled in the opposite direction
 - Faulty or missing drives are detected and the control of other connected drives prevented

Technical specifications	
Electrical properties	
Rated voltage	24 V DC (-20%/+25%)
Permissible ripple in rated voltage	2 Vss
Cutoff	Integrated electronic max. load cutoff, cutoff values dictated by connected drive, see also Planning aids: Section 4
Protection class	
Mechanical properties	
Dimensions (L x H x D)	110 x 110 x 66.7 mm
Electrical connection	4 1
Connection	4-pole to the drives, 2-pole (3-pole with circuit monitoring) on site
Terminals	max. 6 mm² for motor power supply cable, max 2.5 mm² for forwarding cable, max. 1.5 mm² for drives and signal cables
Safety cutoff	In the event of undervoltage < 17.5 V, wire breakage, blockage after 5 attempts to drive in same direction
Max. cable length between control unit and drive	10 m
Potential-free signal contact	Resistive load, max. 1 A/60 V DC (SELV)
Installation and ambient conditions	
Ambient temperature	0 °C to +70 °C
Protection category	IP 54

	M2 500 N M2 1000 N M9 650 N M9 1000 N M9 1500 N M1 1000 N M1 1500 N

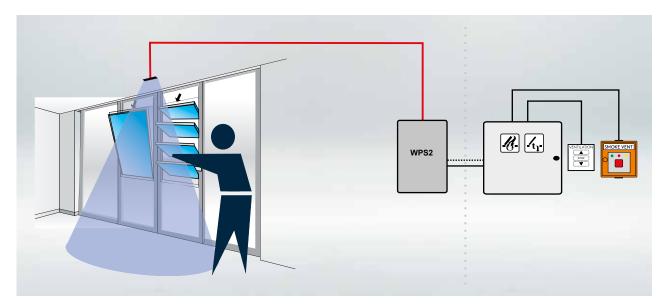

[■] Note: Please refer to our planning aids in Section 4.6 for help with choosing the right synchronous control for your drives.

1.1.3.6 WPS®2 Window Protection System

Contactless pinch protection for power-operated windows

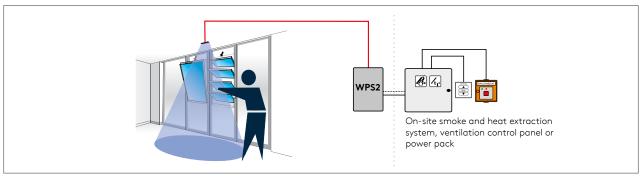

WPS/2 is a finger protection mechanism for automatically operated (power-operated) windows. Special infrared sensors or laser scanners detect the potential danger if somebody is near the window hazard zone, and immediately stop closing the window. The sensor continuously monitors the immediate pinch points and the hazard zone in and around the window. Multiple windows next to each other can also be monitored in one process. WPS/2 is suitable for all types of windows. No major structural work is needed – only the sensor and receiver require installation.

The WPS can be retrofitted, regardless of the drive and control panel make.

Benefits/ Features

- Only finger protection to be TÜV approved in accordance with Machinery Directive 2006/42/EC incl. SIL certification
- Satisfies strictest protection class requirements for power-operated windows
- Regardless of drive and control panel make
- Wide-surface monitoring zone
- Individually adjustable
- Rapid response
- Monitors main and secondary closing edges and drives
- Suitable for all types of windows
- Compact control panel
- Extremely flexible, can be configured to work with different sensors

Note: The size of the monitored area is dictated by the installation height and type of sensor.

As per risk assessment for power-operated windows, WPS2 is also suitable for providing the highest level of protection. Assessment is performed by the fitter in line with Machinery Directive 2006/42/EC based on the following risk assessment:

Installation position

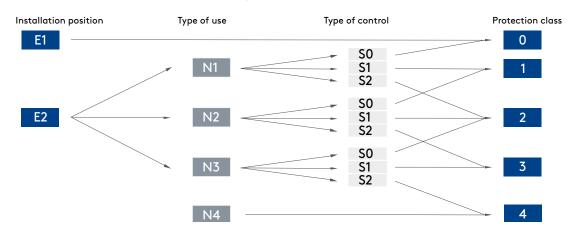

- **E1** Installed at a height of at least 2.5 m
- **E2** less then 2.5 m and freely accessible

Type of use

- N1 Rooms used commercially (e.g. offices)
- N2 Rooms used by people who have been shown how to operate the technology (e.g. homes)
- N3 Rooms frequented by visitors not trained to use the equipment safely (e.g. shops, public venues)
- N4 Rooms for people with special protection requirements (e.g. nursery schools)

Type of control

- **SO** Manual operation (e.g. key switch)
- S1 e.g. Manual operation with visual contact
- **S2** Automatic operation

The outcome dictates the requisite protection class and measures.

Protection class

- 0 = No need for protective measures
- 1 = Warning signs
- **2** = Access control, e.g. signals
- **3** = Access control, e.g. keypad operation
- **4** = Secured by safeguards, e.g. light curtains such as WPS2

WPS2 solutions are available on request.

Note: Please also consult the EuroWindoor guidance sheet KB.01 "Power-operated windows".

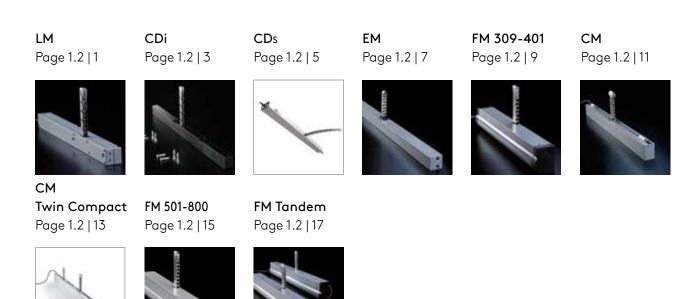

1.2

1.2 Chain drives

Our 24 V DC chain drives for SHE and daily ventilation can be concealed in a window profile or mounted on it, depending on their size and power. Drives are available for the widest range of window types and sizes, with up to 700 N power per drive and opening widths up to 800 mm. Chain drives fitted with EasyDrive technology can, moreover, be configured with the appropriate software.

Our 230 V AC chain drives for daily ventilation are available up to 600 N and with opening widths up to 800 mm. In the case of wide casements or to increase actuating force, two drives can be mounted in tandem on one window.

Our controlled natural ventilation portfolio

Guide to selecting 24 V DC and 230 V AC chain drives

■ **Note:** The diagrams offer an overview of motor performance.

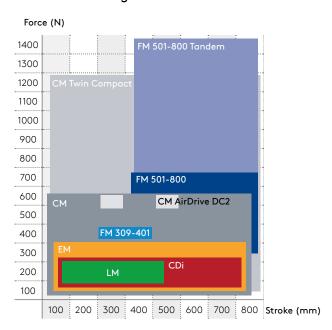

As opening widths increase, the pressing forces of chain drives may decrease. Please refer to the load-displacement diagrams in Section 4.

Preferred applications for 24 V chain drives

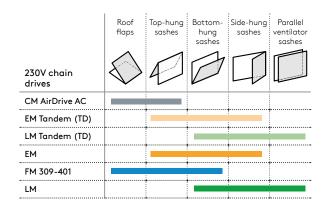

Roof flaps Top-hung Bottom-hung sashes ventilator sashes FM 501-800 TD CM Twin Compact * FM 501-800 CM CM AirDrive DC2 FM 309-401 EM CDi

CM Twin Compact is particularly suitable for narrow and heavy sashes.

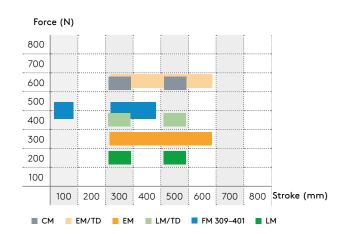

Performance range: 24 V chain drives

Preferred applications for 230 V chain drives

Performance range: 230 V chain drives

1.2.1.1 LM 24 V chain drive

Compact drive for surface-mounted or concealed installation, for SHE and ventilation

In many cases, its slimline design makes concealed installation of the LM possible. With no need for a pivot area, installation is even possible in confined spaces. Numerous fastening options make the drive with pressing/tensile forces of up to 200 N suitable for varied uses. Available types: LM/2 or LM/EasyDrive/2.

Benefits/ Features

- For surface-mounted or concealed installation
- Small installation depth
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested
- Optional parallel operation of multiple drives on one casement using integrated tandem (LM/2) or synchronous control (LM/EasyDrive/2)

Special benefits of LM/EasyDrive/2

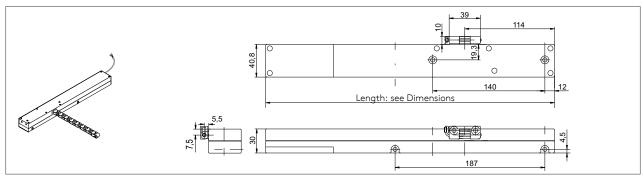

- Up to 4 drives can be synchronised
- Synchronisation and reference run can be performed without the EasyDrive software
- Stroke, speed, force: separately adjustable for OPEN/CLOSE using the EasyDrive software
- Integrated signal contact with configurable function
- Two terminals for easy connection between drives
- Adjustable seal closure relief

Applications

- Smoke extraction; natural aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.1.2 CDi 24 V chain drive

For concealed installation, for SHE and ventilation

CDi was developed specially for concealed installation in window profiles. The centre seal – which is key to ensuring the seal integrity of a window – is not damaged. Appropriate fastening materials are available for all common types of window profile. CDi is available as a standard drive for ventilation applications or as CDi/EasyDrive/2 with numerous possible ventilation and smoke extraction applications.

Benefits/ Features

- For concealed installation in a window profile
- No damage to the important centre seal
- Special fastening sets available to suit different window systems
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested
- Optional parallel operation of multiple drives on one casement using integrated tandem (CDi) or synchronous control (CDi/EasyDrive/2)

Special benefits of CDi/EasyDrive/2

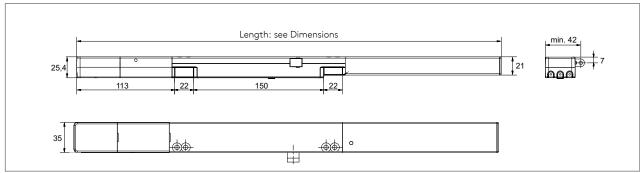

- Up to 4 drives can be synchronised
- Synchronisation and reference run can be performed without the EasyDrive software
- Stroke, speed, force: separately adjustable for OPEN/CLOSE using the EasyDrive software
- Integrated signal contact with configurable function
- Adjustable seal closure relief

Applications

- Smoke extraction; natural aeration and ventilation
- For concealed installation in a window profile

- Housing: Zinc alloy/Aluminium/ABS
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: Black

1.2.1.3 CDs 24 V chain drive

For surface mounting for SHEVS and ventilation

Compact window drive for surface mounting. Ideal for daily ventilation operation. Connection on both sides via plug connectors for easy connection of several drives to one window casement. Simple basic configuration on site without PC tool. For ventilation and smoke extraction.

Benefits/ Features

- Low installation height
- Simple installation by click fastening both on the frame and on the sash with slim brackets and concealed fastening screws
- Connectors can be connected on both sides
- Adjustable seal relief
- Integrated overload protection
- Stroke, speed, force: for OPEN/CLOSE separately adjustable via software
- Running speed in OPEN and CLOSE direction reducible to < 5 mm/s
- Reverse on detection of overload in CLOSE direction
- Synchronous operation of up to 4 drives and additional connection of up to two locking motors
- Teaching of: Closing position and opening width, as well as connecting several drives without further aids, also on site
- Integrated configurable signal contact

Applications

- Smoke extraction; natural aeration and ventilation
- Windows, facades and conservatories

Material

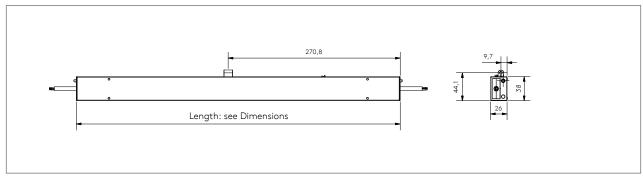

- Housing: Aluminium, End caps: plastic
- Opening mechanism: Stainless steel chain, maintenance-free

1.2.1.4 EM 24 V chain drive

Universal 300 N drive for SHE and ventilation

With its tractive and pressing force of 300 N, EM is the standard drive for applications in the midperformance range. Its small surface height makes it suitable for applications involving confined installation spaces, e.g. in front of shades. Its linear design blends easily with window and façade profiles. Available types: EM/2 or EM/EasyDrive/2 with numerous possible applications.

Benefits/ Features

- Drive with small installation depth
- 300 N pressing force up to 600 mm opening width
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested
- Optional parallel operation of multiple drives on one casement using integrated tandem (EM/2) or synchronous control (EM/EasyDrive/2)

Special benefits of EM/EasyDrive/2

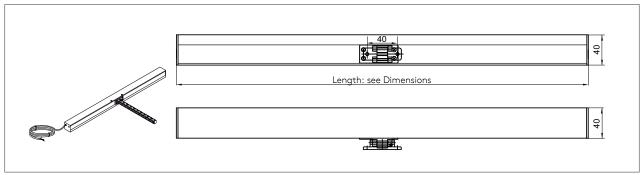

- Up to 4 drives can be synchronised
- Synchronisation and reference run can be performed without the EasyDrive software
- Stroke, speed, force: separately adjustable for OPEN/CLOSE using the EasyDrive software
- Integrated signal contact with configurable function
- Two terminals for easy connection between drives
- Adjustable seal closure relief

Applications

- Smoke extraction; natural aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Aluminium, End caps: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free

1.2.1.5 FM 309-401 24 V chain drive

Powerful and quiet drive for SHE and ventilation

FM 309-401 is fitted with a double chain that merges and interlocks like a zip. This gives the drives excellent mechanical stability despite the flat chain design. As a result, even opening units with little frame clearance can be motor-actuated. Its strong and quiet drive and special design make it suitable for applications with more stringent requirements in terms of convenience, e.g. including conservatories.

Benefits/ Features

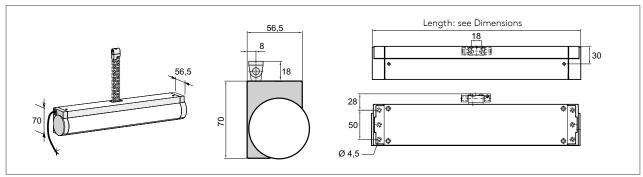

- Tractive/pressing forces up to 450 N
- Double chain drive, zip fastener principle
- Low-noise drive
- Mechanically adjustable seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested

Applications

- Smoke extraction; natural aeration and ventilation
- Top-, bottom-, side-hung and roof windows, even if they have little frame clearance
- Conservatories

- Housing: Aluminium, End caps: Black or grey plastic
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.1.6 CM 24 V chain drive

Opens and closes roof and top-hung windows outwards, for SHE and ventilation

The drives in the CM series are powerful – up to 600 N – yet with a slim and linear design. All of the brackets and connections are located on one installation level behind the drive. Brackets can be slid along the drive to various positions for easier installation.

Benefits/ Features

- Tractive/pressing forces up to 600 N
- Sliding brackets facilitate installation
- Brackets behind the drive for a better appearance
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested
- Optional parallel operation of multiple drives on one casement using integrated tandem (CM) or synchronous control (CM/EasyDrive/2)

Special benefits of CM/EasyDrive/2

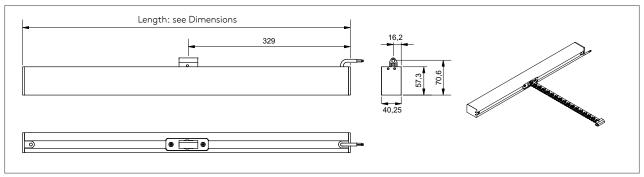

- Up to 4 drives can be synchronised
- Synchronisation and reference run can be performed without the EasyDrive software
- Stroke, speed, force: separately adjustable for OPEN/CLOSE using the EasyDrive software
- Integrated signal contact with configurable function
- Two terminals for easy connection between drives
- Adjustable seal closure relief

Applications

- Smoke extraction; natural aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Aluminium profile, End caps: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.1.7 CM EasyDrive/2 Twin Compact 24 V chain drive

Specialist for narrow, heavy casement formats, for SHE and ventilation

CM EasyDrive/2 Twin Compact is a real powerhouse with 1200 N pressing and tractive force. Compactly designed and fitted with opposite directional stainless steel chains, it has been specially designed to open and close narrow opening elements with heavy casement loads.

Benefits/ Features

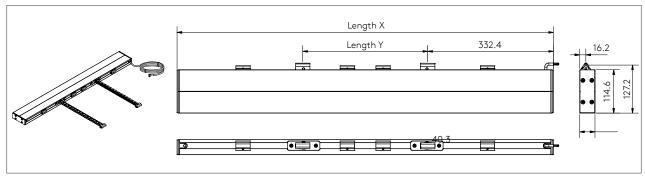

- Tractive/pressing forces up to 1200 N
- Opposite directional stainless steel chains
- Sliding brackets facilitate installation
- Brackets behind the drive for a better appearance
- Integrated overload protection
- Non-corrosive external parts
- Stroke, speed, force: separately adjustable for OPEN/CLOSE using the EasyDrive software
- Integrated signal contact with configurable function
- Adjustable seal closure relief

Applications

- Smoke extraction; natural aeration and ventilation
- Specially designed for narrow and heavy top-hung and roof windows

- Housing: Aluminium profile, End caps: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free

1.2.1.8 FM 501-800 24 V chain drive

Powerful and low-noise drive with up to 700 N, for SHE and ventilation

FM 501-800 is fitted with a double chain that merges and interlocks like a zip. As a result, the structure is very stable on all sides when the chain is extended. Nevertheless, the chain is flexible and, in many instances, allows the drive to be fixed without the need for further swivel brackets. The seal closure on the drive is mechanically adjustable. Its quiet operation makes it suitable for use in acoustically sensitive environments.

Benefits/ Features

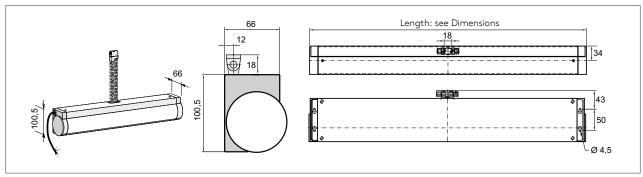

- Tractive/pressing forces up to 700 N
- Double chain drive, zip fastener principle
- Low-noise drive
- Mechanically adjustable seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested

Applications

- Smoke extraction; natural aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Aluminium, End caps: Black or grey plastic
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.1.9 FM 501-800 Tandem 24 V chain drive

For roof, top- and bottom-hung windows requiring two drives, for SHE and ventilation

FM 501-800 is fitted with a double chain that merges and interlocks like a zip. As a result, the structure is very stable on all sides, even when the chain is extended. Nevertheless, the chain is flexible and, in many instances, allows the drive to be fixed without the need for further swivel brackets. The seal closure on the drive is mechanically adjustable. Its quiet operation makes it suitable for use in acoustically sensitive environments.

Benefits/ Features

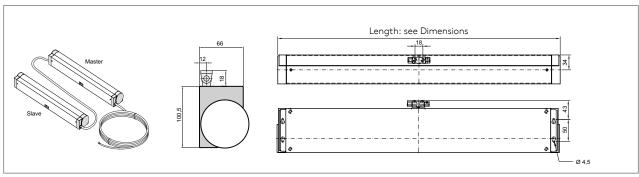

- \blacksquare Tractive/pressing forces up to 2 x 700 N
- Tandem drive with double chain, zip fastener principle
- Tandem control integrated in the Master
- Low-noise drive
- Mechanically adjustable seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested

Applications

- Smoke extraction; natural aeration and ventilation
- Wide and/or heavy top-, bottom-, side-hung and roof windows

- Housing: Aluminium, End caps: Black or grey plastic
- Opening mechanism: Double stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

Technical specifications	
Electrical properties	
Rated voltage	24 V DC (-20%/+25%)
Permissible ripple in rated voltage	2 Vss

1.2.2.1 LM and LM AirDrive ventilation chain drives

Compact 230 V or 24 V drive for daily ventilation in bottom- and top-hung and roof windows

In many cases, its slimline design makes concealed installation of the LM possible. With no need for a swivel range, installation is also possible in confined spaces. Numerous fastening options make the drive with pressing/tractive forces of up to 200 N suitable for varied uses.

LM/AirDrive is an affordable drive for standard ventilation applications and is supplied complete with mains cable and brackets for connection to the frame. LM/AirDrive is available with 24 V DC or 230 V AC. The 230 V versions are fitted with an integrated ballast unit and run on 230 V mains voltage.

Benefits/ Features

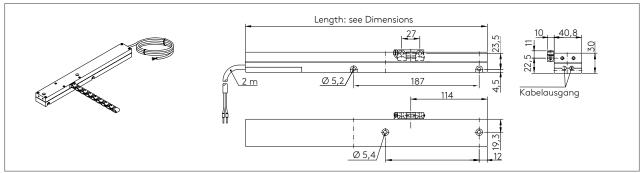

- For surface-mounted or concealed installation
- Small installation depth
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested
- LM/AirDrive is available with 24 V DC or 230 V AC

Applications

- Daily aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.2.2 LM Tandem 230 V chain drive

 $230\ V$ drive for daily ventilation in particularly wide bottom- and top-hung and roof windows requiring two drives

Versatile 230 V drive solution comprising two LM/2 drives with up to 2 x 200 N pressing and tractive force, for wide casements, flaps and skylights. An external ballast unit is used for control.

Benefits/ Features

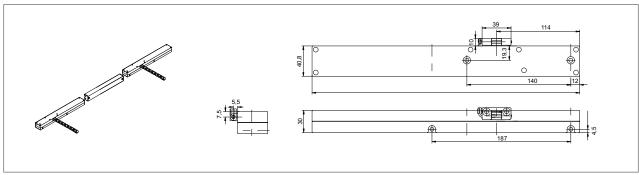

- 230 V drive with external ballast
- For surface-mounted or concealed installation

1.2.2.3 EM 230 V chain drive

Universal 230 V drive with 300 N for daily ventilation

With its tractive and pressing force of 300 N, EM AC is a universal drive for the mid-performance range. Its small surface height makes it suitable for applications involving confined installation spaces, e.g. in front of shades. Its linear design blends easily with window and façade profiles. EM AC is equipped with an integrated ballast unit and runs on 230 V mains voltage.

Benefits/ Features

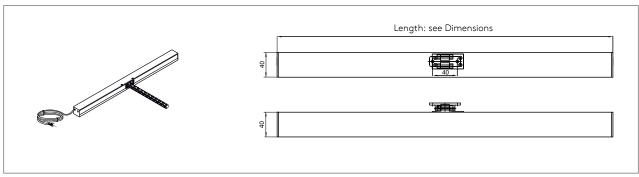

- Drive with small installation depth and slim, linear housing
- 300 N pressing force up to 600 mm opening width
- Integrated 230 V ballast
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested

Applications

- Daily aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Aluminium profile, End caps: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.2.4 EM Tandem 230 V chain drive

Universal 230 V drive with $2 \times 300 \text{ N}$ for daily ventilation

With their tractive and pressing force of 2 x 300 N, the 230 V tandem drives in the EM series are universally suitable for wide casements. Their small surface height makes them suitable for applications involving confined installation spaces, e.g. in front of shades. Their linear design blends easily with window and façade profiles. EM Tandem AC is equipped with an integrated ballast unit and runs on 230 V mains voltage.

Benefits/ Features

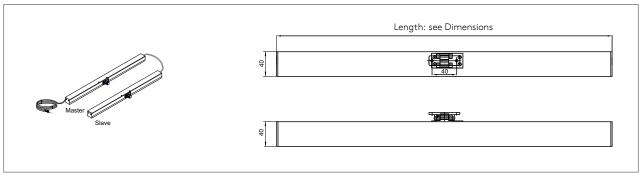

- 230 V tandem drives
- Small installation depth and slim, linear housing
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts
- Integrated 230 V ballast
- TÜV type tested

Applications

1.2.2.5 CM AirDrive ventilation chain drive

Specialist for daily ventilation in narrow, heavy bottom- and top-hung and roof windows

The AirDrive units in the CM series were designed specially for ventilation applications. With their force of 600 N, they are ideal for operating heavy roof windows and top-hung sashes. They are characterised by their slimline, linear design and low power consumption. CM/AirDrive is available with 24 V DC or 230 V AC.

Benefits/ Features

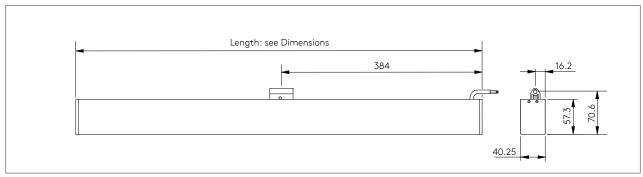

- Tractive/pressing forces up to 600 N
- Same housing for 24 V DC and 230 V AC versions
- Brackets concealed behind the drive for a better appearance
- Electronically defined contact pressure ensures seal closure
- Integrated overload protection
- Non-corrosive external parts

Applications

- Daily aeration and ventilation
- Top-, bottom-, side-hung and roof windows

- Housing: Aluminium, End caps: Die-cast zinc
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.2.6 FM 309-401 AC 230 V chain drive

230 V drive for daily ventilation in top-, bottom-, side-hung and roof windows

The FM 309-401 230 V drive series is fitted with a double chain that merges and interlocks like a zip. This gives the drives excellent mechanical stability despite the flat chain design. As a result, even opening units with little frame clearance can be servo powered. Its strong and quiet drive and special design make it suitable for applications with more stringent requirements in terms of convenience, e.g. including conservatories. Available types: FM/309/140 and FM/309-401. FM 309-401 AC is equipped with an integrated ballast unit and runs on 230 V mains voltage.

Benefits/ Features

- Tractive/pressing forces up to 450 N
- Double chain drive, zip fastener principle
- Low-noise drive
- Mechanically adjustable seal closure
- Integrated overload protection
- Non-corrosive external parts
- TÜV type tested

Special benefits of FM 309/140 AC

 Opening widths can be switched between 309 mm and 140 mm, therefore particularly suited for use in conservatories with retrofitted sun protection

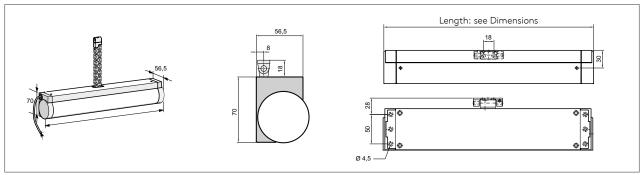

Applications

- Daily aeration and ventilation
- Top-, bottom-, side-hung and roof windows, even if they have little frame clearance
- Conservatories

Material

- Housing: Aluminium, End caps: Black and grey plastic
- Opening mechanism: Stainless steel chain, maintenance-free
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

1.2.3 Chain drive accessories

The choice of window profiles and opening types is extensive. The range of accessories for our chain drives is just as extensive – including a large number of brackets and hinge brackets, acoustic signals and signal contacts, right up to our innovative EasyDrive software. All accessory components are, of course, perfectly matched to individual window systems and the drives in question.

Our portfolio

- LM accessories
- CDs accessories
- EM accessories
- CM accessories
- FM accessories
- EasyDrive software
- EasyDrive/2 cable sets
- Cable transitions
- WPS/2

KUE-T1 cable transition

Plug-connected, concealed cable transition for chain drives.

- Plug connection with locking screws, can be disconnected.
- For use as an electrical interface between window casements and frames fitted with 24 V chain drives.

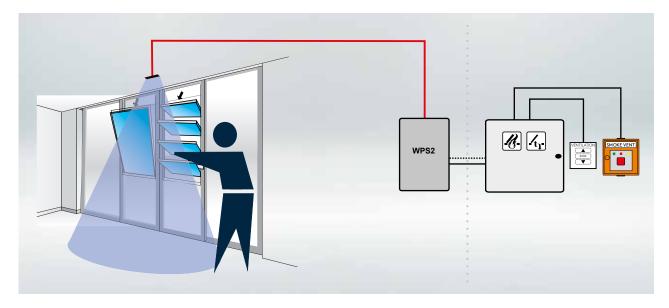

Order information		
KUE-T1 cable transition		
Item number	13302600113	

1.1.3.7 WPS®2 Window Protection System

Contactless pinch protection for power-operated windows

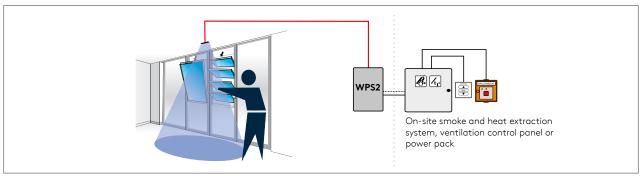

WPS/2 is a finger protection mechanism for automatically operated (power-operated) windows. Special infrared sensors or laser scanners detect the potential danger if somebody is near the window hazard zone, and immediately stop closing the window. The sensor continuously monitors the immediate pinch points and the hazard zone in and around the window. Multiple windows next to each other can also be monitored in one process. WPS/2 is suitable for all types of windows. No major structural work is needed – only the sensor and receiver require installation.

The WPS can be retrofitted, regardless of the drive and control panel make.

Benefits/ Features

- Only finger protection to be TÜV approved in accordance with Machinery Directive 2006/42/EC incl. SIL certification
- Satisfies strictest protection class requirements for power-operated windows
- Regardless of drive and control panel make
- Wide-surface monitoring zone
- Individually adjustable
- Rapid response
- Monitors main and secondary closing edges and drives
- Suitable for all types of windows
- Compact control panel
- Extremely flexible, can be configured to work with different sensors

Note: The size of the monitored area is dictated by the installation height and type of sensor.

As per risk assessment for power-operated windows, WPS2 is also suitable for providing the highest level of protection. Assessment is performed by the fitter in line with Machinery Directive 2006/42/EC based on the following risk assessment:

Installation position

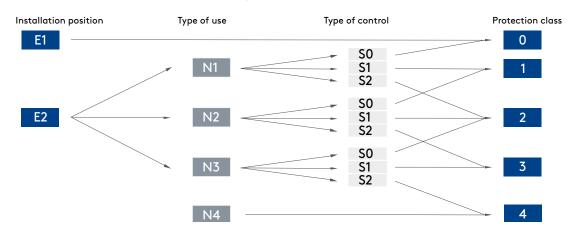

- **E1** Installed at a height of at least 2.5 m
- **E2** less then 2.5 m and freely accessible

Type of use

- N1 Rooms used commercially (e.g. offices)
- N2 Rooms used by people who have been shown how to operate the technology
- N3 Rooms frequented by visitors not trained to use the equipment safely (e.g. shops, public venues)
- N4 Rooms for people with special protection requirements (e.g. nursery schools)

Type of control

- S0 Manual operation (e.g. key switch)
- **S1** e.g. Manual operation with visual contact
- **S2** Automatic operation

The outcome dictates the requisite protection class and measures.

Protection class

- **0** = No need for protective measures
- 1 = Warning signs
- **2** = Access control, e.g. signals
- **3** = Access control, e.g. keypad operation
- **4** = Secured by safeguards, e.g. light curtains such as WPS2

WPS2 solutions are available on request.

Note: Please also consult the EuroWindoor guidance sheet KB.01 "Power-operated windows".

1.3 Electrical locking mechanisms

Apart from the appropriate holding power of the drives (at one or more lock points), larger windows often require an additional locking drive to ensure compliance with the performance classes defined in EN 14351-1 – particularly with regard to wind loads, resistance to heavy rain and airtightness. An alternative solution would be to use our magnetic clamps, e.g. on inward opening bottom-hung sashes. They hold the window securely closed without the need for an additional locking drive.

STG-Beikirch offers various locking drives for servo powered windows with chain or linear drives to satisfy different requirements, together with additional locking mechanisms and magnetic clamps.

EHM Page 1.3 | 7

Accessories
Page 1.3 | 9

1.3.1.1 RM 24 V locking motor

Locking drive engages with the window fitting to unlock/lock it

Slimline locking drive for mounting on the surface or in the profile, to enhance the chain drive. The tappet on the locking motor engages with the window fitting and unlocks it before the chain drive opens the casement. Integrated sequential control ensures the correct sequence of actions when opening and closing. Available types: RM Basic and RM EasyDrive/2.

Benefits/ Features

- Incorporated max. load cutoff and sequential control
- RM Basic is compatible with all chain drives in the LM/2, EM/2, CM and FM (with signal contact) series
- Actuating force 600 N or 1200 N
- Installed on the casement or concealed in the profile
- Tappet optionally left or right
- For actuating push rods
- Two locking motors can be tandem operated on one casement

Special benefits of RM/EasyDrive/2

- Specially designed for combination with all EasyDrive/2 chain drives and CDs
- Configuration on a computer with EasyDrive software and USB converter/2
- Optional time-lagged operation of two RM EasyDrive/2 with EasyDrive software
- Adjustable locking direction
- Actuating force 1200 N

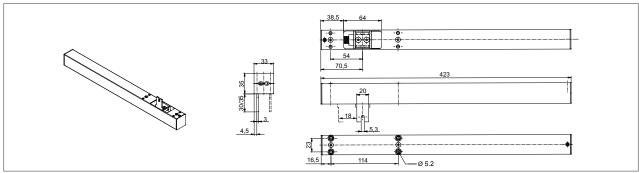

Applications

For locking larger windows using the inside fitting

Material

- Housing: Aluminium profile, End caps: Black plastic
- Colour: powder-coated white (RAL 9016) or silver grey (RAL 9006) or RAL on request

Version	RM Basic	RM/EasyDrive/2
Electrical properties		
Rated voltage	24 V DC (-20%/+25%)	24 V DC (-15%/+25%
Permissible ripple in rated voltage	2	Vss
Rated current	0.8 A at 600 N 1.2 A at 1200 N	1.5 A at 1200 N
Cutoff	Integrated electro	nic max. load cutoff

1.3.1.2 RM mini 24 V locking motor

Locking motor integrated in the profile engages with the window fitting to unlock/lock it

Very small locking drive for integration in the profile to enhance chain drives. The tappet on the locking motor engages with the window fitting and unlocks it before the chain drive opens the casement. Integrated sequential control ensures the correct sequence of actions when opening and closing. Available types: RM mini and RM mini EasyDrive/2.

Benefits/ Features

- Extremely compact housing for integration in the profile
- Size and fastenings perfectly matched to CDi chain drives
- RM mini is compatible with all chain drives in the LM/2, EM/2, CM and FM (with signal contact) series
- Automatic cutoff by installed limit switch and integrated sequential control for operating the connected chain drives
- Actuating force 600 N
- Optional tandem operation of two RM mini in one window

Special benefits of RM/EasyDrive/2

- Specially designed for combination with EasyDrive/2 chain drives and CDs
- Adjustable locking direction
- Optional time-lagged operation of two RM mini EasyDrive/2 with EasyDrive software

Applications

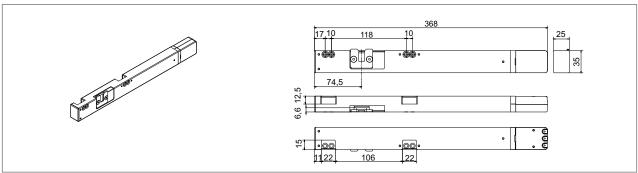

Motorised actuation of window fittings in combination with chain drives

1.3.2 ZUV2 additional lock

Electromotive additional lock for inward opening windows, for combination with linear drives and sequential control

Electromotive additional lock for use in connection with linear drives on large casements without own fittings. It provides an additional locking point and assures adequate seal closure on large casements. One additional ZWV mechanical secondary lock can provide two additional locking points on one side of a casement.

Benefits/ Features

- Locking force max. 500 N
- Without integrated load cutoff; ESF or ESF-T electronic sequential control (must be ordered separately) for automatic load-dependent cutoff when end position is reached
- Provides additional lock points
- Can be combined with ZWV mechanical secondary lock with 1 m connecting rod

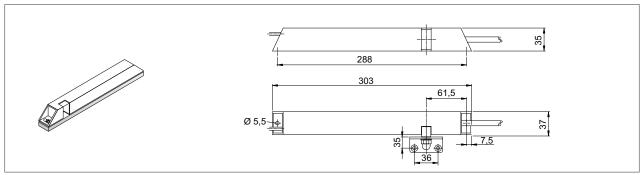

Applications

- Electromotive lock on inward opening bottom-, side-hung and pivoting windows
- Provides an additional lock on a window in combination with linear drives

Material

- Housing: Aluminium profile
- Colour: EV1/anodised silver

Technical specifications		
Electrical properties		
Rated voltage	24 V DC (-8%/+20%)	
Permissible ripple in rated voltage	2 Vss	
Rated current	Approx. 0.65 A	
Cutoff	External electronic load cutoff with sequential control	
Protection class	III	
Mechanical properties		
Stroke length, approx.	Matched to bolt lock	
Pressing force	500 N	
Tractive force	500 N	
Locking force	Max. 3000 N	
Running speed	5 s (until completely open /locked)	
Duty cycle	DC 30 (10 min.)	
Service life	> 10,000 cycles	
Dimensions (L x H x D)	303 x 35 x 37 mm	
Electrical connection		
Connection	$2 \times 0.5 \text{ mm}^2$, cable length approx. 2.5 m	
Installation and ambient conditions		
Ambient temperature	-5 °C to +65 °C	
Protection category	IP 54	

Depending on the power controls used, higher currents must be expected in the start-up torque when dimensioning the cable cross-sections of the motor supply cables. Functionally reliable operation is guaranteed when connected to corresponding control systems from the same manufacturer. Conformity of functional reliability must be requested for operation on control systems from third party manufacturers.

• Note: Please order accessories such as mounting plate and ZWV separately.

Depending on the control centres used, current surges when starting up may need to be considered when dimensioning the power supply and the motor wiring. Functionally reliable operation is guaranteed when connected to appropriate control panels from the same manufacturer. Please check functional reliability conformity if you are planning to use control panels from different manufacturers.

1.3.3 EHM-9 and EHM-91 electric magnetic clamps

Enhance drives, assure sufficient contact pressure

Electrically operated magnetic clamps can be used in addition to drives on bottom- or side-hung sashes to assure adequate seal closure, especially on asymmetric drives. Available types: EHM-9 (round) or EHM-91 (rectangular).

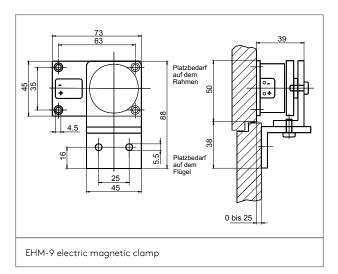

Benefits/ Features

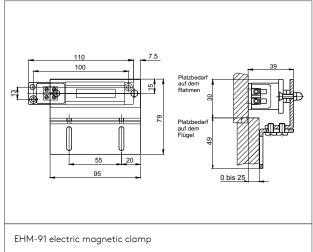

- Holding force 600 N (EHM-9) or 400 N (EHM-91)
- With counter plate and adjustable casement bracket
- Complete with motor connection module
- Can be used on control panels without disconnecting motor voltage

Applications

- Enhanced seal closure on motorised casements, especially when the drive is mounted on one side or asymmetrically
- Adjustable locking direction

Technical specifications		
Version	EHM-9	EHM-91

2 Control panels

STG-Beikirch offers control panels, control systems and a wide range of accessories to build SHE and ventilation systems that suit both the building requirements and the individual needs of occupants and operators.

The systems can be activated manually from SHE control points, or automatically by smoke detectors or thermal sensors, such as a fire alarm system, and can be operated with a wide range of pneumatic or electric controllers.

Vent switches or sensors can drive the manual or automatic aeration and ventilation of a building. Windows and skylight domes that close automatically – when it starts to rain or the wind speed gets up, for example – offer a building reliable protection against weather-related damages.

Our portfolio

- Central controllers for 24 V SHE and ventilation systems
- Decentralised BUS control panels for 24 V SHE and ventilation systems
- Control panels for smoke pressure systems (SPS)
- 24 V and 230 V ventilation control panels
- Accessories for SHE and ventilation control panels

» Find out more:

If you would like to learn more about our products and services, please go to www.stg-beikirch.de.

2.1 Central 24 V control panels for SHE and ventilation

SHE systems made by STG-Beikirch keep smoke levels reliably low on escape routes, enable fast and safe evacuation in the event of fire, and thus help the fire brigade to fight the fire. At the same time, they can be used to protect production and manufacturing equipment, and warehouse goods.

The SHE systems are, moreover, suitable for natural aeration and ventilation and can be integrated seamless and efficiently in building management systems.

Our portfolio

2.1

2.1.1 (TRZ) staircase control panels

Control panels servicing the widest range of SHE and ventilation requirements

24 V DC control panel for electromotive smoke extraction and daily ventilation. Designed specifically for use in staircases. Available types: TRZ Plus 2A, TRZ Plus Comfort and Compact Control Panel 2A (/M). Special versions: TRZ Plus DG (for pressurised gas generators) on request, and TRZ VdS, see Section 3.1.4.

Benefits/ Features

- Max. 2 A current output
- Complete with "Daily ventilation" function
- One SHE group (RG) and one ventilation group (LG)
- PC service port interface for advanced configuration options
- Integrated service timer
- Integrated 230 V AC/24 V DC power supply, emergency power batteries and charging pack for 72 hours operational readiness during power cuts
- Optional additional extension modules (already integrated in TRZ Plus Comfort)
- Optional flush-mounted version
- TÜV type tested
- Tested to EN 12101-10

Applications

Ventilation and smoke and heat extraction in staircases

Material

- Plastic housing for surface-mounted installation,

2.1.2 Compact Control Panel

High-performance SHE and ventilation control panels

24 V DC control panel for electromotive smoke extraction and daily ventilation. Available types: Compact Control Panel 4A/M or Compact Control Panel 8A/M in metal housing.

Benefits/ Features

- 4 A or 8 A current output, depending on model
- Complete with "Daily ventilation" function
- One SHE group (RG) and two ventilation groups (LG)
- PC service port interface for advanced configuration options
- Integrated service timer
- Integrated 24 V DC power supply, emergency batteries and charging pack, parallel operation, 72 hours operational readiness during power cuts
- Monitoring of detector circuits (automatic detectors and SHE manual call points), emergency batteries and connected drives
- Optional cascading of up to 8 control panels
- DIP switch for adjustable special functions
- TÜV type tested
- Tested to EN 12101-10

Applications

Buildings with smoke and heat extraction and/or natural aeration and ventilation requirements

Material

- Housing: choice of plastic or metal
- Colour: Grey

2.1.3 Compact Control Panel EasyConnect 20 A Easy Connect

Connectable, flexible, powerful control panel for SHEV and Ventilation

24 V DC compact control panel with high current output of max. 20 amps with networking capability from up to 26 further EasyConnect compact control panels.

Benefits/ Features

- Current output of 20 A
- Two SHE groups (RG) and two ventilation groups (LG), can be used separately or connected together
- Two drive lines for 24 V DC drives, max. current output 16 A per drive line
- Two connection inputs for SHEV button (max. 10 per connection), smoke detector (up to 20 per connection), fire alarm system (FAS) and ventilation switches (up to 10 per connection)
- Further connection options for: Wind/rain detector, 3 configurable potential-free relay outputs (default: fault, trip, wind/rain signal), one separate voltage output 27 V DC / 4 A (10 s)
- Integrated 24 V DC power supply, emergency batteries and charging pack, parallel operation, 72 hours operational readiness during power cuts
- Line monitoring of the detector circuits (automatic detectors, SHE manual call points, FAS) and the connected drives, mains and battery monitoring
- Basic functions adjustable via DIP switches
- 6 displays on the front panel (operation, activation, fault, Bus, maintenance, 230 V)
- Status and error code display via internal 2 x 7-segment display

Applications

Buildings with smoke and heat extraction requirements and/or natural ventilation requirements

Material

Housing: plasticColour: Grey

2.1.4 MZ3 Basic modular control panel

MZ3 Basic modular control panels are standardised SHE control panels based on the functional, modular and configurable MZ3 system. MZ3 Basic meets the requirements for pre-configured SHE control panels that perform the most commonly required applications.

Benefits/ **Features**

- Compact SHE standard control panel based on MZ3
- Pre-configured at the factory and therefore ready for immediate use
- With one SHE and two ventilation groups assigned to 3 to 6 motor outputs, depending on the size of the control panel
- Standard equipped for activation by manual SHE control points, smoke detectors and fire alarm systems
- Connections for two vent switches and one wind/rain sensor
- Option for bridging both ventilation groups to form a single group
- Energy supply tested to EN 12101-10

Applications

- Natural smoke extraction (NSE)
- Natural aeration and ventilation

Material

Housing: Sheet steel, surface-mounted installation

2.1.5 MZ3 modular control panel

SHE and MSE control cabinets up to 192 A, custom-configured and built to project requirements

MZ3 is a functional, modular and configurable SHE control system that can also be used for natural aeration and ventilation or incorporated into a building management system.

When planning and configuring an MZ3 using the MZ3 Planning and Configuration Tool, each required function is simply compiled on the computer using the Drag & Drop function.

Thanks to the new functional approach to system configuration, the individual requirements of any building can be easily and flexibly mapped during system compilation with the help of the MZ3 Tool. The system was designed to be fit for the future and is already able to link systems together or to link to the building automation system.

The LON interface ensures that MZ3 is compatible with the other LON-SHE components made by STG-BEIKIRCH and can be efficiently integrated into decentralised SHE and ventilation control networks.

A building management system has fully access to all MZ3 ventilation functions via the KNX interface and can therefore incorporate the connected opening elements effectively into the ventilation concepts.

Please refer to Section 2.2 for products and information about decentralised solutions.

These MZ3 solutions are custom-configured for your project - please don't hesitate to ask us for advice.

• Note: Please ask for a free demonstration copy of our MZ3 Tool.

MZ3 Tool for planning and configuration

Benefits/ **Features**

- New functional approach to system configuration
- Very flexibly, project-specific solutions with custom configuration of functions
- Standard design for systems up to 192 A larger systems are possible please consult us
- Control functions can be interconnected via BUS system to create a decentralised system configuration
- Interconnectivity with building management systems via BUS systems (LON, KNX, etc.)
- Integrated functions include: smoke extraction based on wind direction and strength, restricting opening to any position, servicing and monitoring function, configurable status reports for each area, temperature-dependent ventilation control, night-time cooling, various shade functions and analogue signal processing
- Planning and configuration with user-friendly MZ3 Tool
- Drag & Drop makes configuration easy
- The Configuration Tool specifies all the components and calculates the most cost-efficient and space-saving variant
- Little wiring needed
- Energy supply tested to EN 12101-10

Applications

- Natural smoke extraction (NSE)
- Mechanical smoke extraction (MSE)
- Controlled natural ventilation
- Ventilation control
- Smoke extraction/aeration and ventilation based on wind direction and strength

2.4 24 V and 230 V ventilation control panels

Activated by vent switches and sensors, our power packs, ventilation and wind/rain control panels can manually and/or automatically open and close electromotive windows, roof flaps and skylight domes in all sorts of buildings for ventilation purposes.

As part of the smart control system, they offer huge benefits for property developers, architects, occupants and the environment.

2.4.1 VNT 2,5A and VNT 8A/2 ballasts

For operating 24 V drives on 230 V AC mains voltage

Various performance classes of VNT ballast units are available. If the input mains voltage is 230 V AC, they supply polarised 24 V DC voltage (+24 V or -24 V) to operate linear and chain drives.

Benefits/ Features

- OPEN/CLOSE keypad operation via external 230 V AC vent switch
- Multiple power packs can be cascaded and operated via one or several vent switches
- Integrated fuse protection for primary 230 V AC voltage
- Multi-coloured LED display of status and malfunctions

Applications

Connecting 24 V drives to a 230 V supply

Material

Plastic housing for surface-mounted installation, grey

2.4.2 24 V iVent/2 8A ventilation control panel

Versatile control panel for natural aeration and ventilation

Ventilation control panel for operating 24 V DC drives with up to 8 A current consumption. Optional connection of ventilation buttons, wind/rain sensors and ventilation control sensors.

Benefits/ **Features**

- Integrated standard ventilation control function
- Visual display of malfunctions and operating status
- Optional cascading of multiple iVent/2 8A and operation via one or several vent switches
- Functions governing interaction with shades 1)
- Internal function monitor signals malfunctions
- Complete with service port interface for configuring advanced functions using the PC Service Port Software. Examples:
 - Time-dependent stroke limitation 1)
 - Automatic ventilation via temperature 1)
 - Automatic closing after a set time 1)
- Manual ventilation, pulse or keypad (dead man) operation 1)
- Alteration of the properties governing the operating displays 1)
- Adjustable pause time when reversing drive voltage polarity 1)
- Higher-level closing function in case of rain

Applications

Natural aeration and ventilation

Material

- Plastic housing for surface-mounted installation
- Colour: Grey

¹⁾ Full functional scope only possible using a notebook/PC with Service Port Software installed, and a connecting cable.

Technical specifications	
Electrical properties	
Primary energy supply	
Mains supply voltage	230 V AC (±10 %), separate fuse protection

2.4.3 WRZ wind and rain detection panel

For operating 230 V AC ventilation drives and wind/rain sensors

Ventilation control panel for operating max. 40 x 230 V AC ventilation drives (e.g. M3) with a total current consumption of 8 A, split among 4 motor groups. Optional connection of vent switches and wind/rain sensors. The wind/rain detection panel is available in types $10M/16^{-1}$ and $40M/46^{-1}$, to which either up to 10 drives in one group or max. 40 drives in up to 4 groups (max. 10 drives per group) can be connected.

Benefits/ **Features**

- Connection for up to two WRM/2 24V wind/rain sensors or up to two RM/2 24V rain sensors (type WRZ 40 M/4G)
- Connection for 230 V and 24 V vent switches
- Automatically closes windows, flaps and skylight domes operated by 230 V AC drives following wind/rain signal
- 4 potential-free relay contacts for quadrupling and forwarding a wind/rain signal (type WRZ 10 M/1G)
- Timer-controlled forwarding of the wind/rain signal, configurable via DIP switch
- Timer-controlled supply to the CLOSE drive output (ventilation function is released in spite of wind/rain signal), configurable via DIP switch (type WRZ 10 M/1G)
- Optional cascading of multiple WRZ 10M-1G to duplicate the signal; max. 4 can be cascaded with a WRZ40M-4G
- Visual status display
- Indication of the triggering of the respective detectors, separated by wind and rain

Applications

230 V AC ventilation drives and 24 V DC wind/rain sensors

Material

- Plastic housing for surface-mounted installation
- Colour: Grey

2.4.4 Switching devices

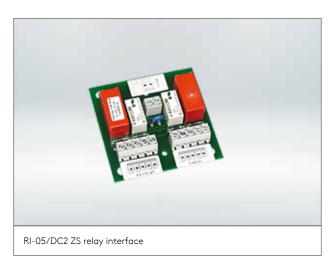

RI-05/DC2 relay interface

For operating two-pole drives on 5-pole controllers, e.g. sensors, power packs and vent switches.

- Operating voltage: 24 V DC (-15 % /+25 %)
- Output: 2-pole
- Current output: max. 10 A
- Local input: 5-pole
- Protection category: IP 54
- Dimensions (W x H x D): 85 x 37 x 86 mm
- Housing for surface-mounted installation, grey plastic

Item number	60000687	

2.5 Accessories for SHE and ventilation control panels

We offer a wide range of accessories for our SHE and ventilation controllers.

Our safety components - such as SHE manual call points and automatic detectors - comply with the specifications of applicable standards and directives.

Sensors control a room climate to individual requirements, while wind and rain detectors ensure that all elelctromotive window casements and roof flaps are reliably closed in bad weather.

2.5.1 Accessories for SHE control panels

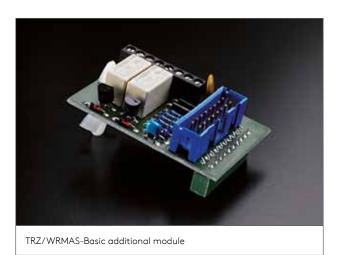

TRZ/RBH-Basic additional module for SHE manual call point

For TRZ Plus 2A.

- For retrofitting in the front door.
- With SHE activation key and CLOSE SHE key.
- Operational readiness, activation and malfunction displays.
- Labelling and functions based on VdS 2592.
- Glass pane included in the scope of supply.

Order information	
TRZ/RE	3H-Basic
ltem number	61900080

TRZ/WRMAS-Basic additional module

For TRZ Plus 2A and Compact Control Panel 2A (/M). For connecting one WRM/2 24V wind/rain sensor or one RM/2 24V rain sensor and for forwarding (SHE) alarms and malfunction messages.

- Alarm = NO contract, malfunction = NC contact.
- One connection each for potential-free message alarm (SHE activation) and collective malfunction, contact load max. 24 V/max. 0.5 A.

Order information		
TRZ/WRMAS-Basic		
Item number	61900090	

TRZ flush mounting kit

For all TRZ SHE control panels.

Flush mounting kit comprising a flush-mounted box and a masking frame for flush-mounted installation.

- Flush-mounted box dimensions $(H \times W \times D)$: 270 x 154 x 85 mm
- Masking frame dimensions (H x W x D): 322 x 247 x 2 mm

Order information			
TRZ flush mounting kit			
Item number	13320200400		

Flush-mounting kit for Compact Control Panel 2A/4A

For Compact Control Panel 2A and 4A in plastic housing.

Flush mounting kit comprising a flush-mounted box and a masking frame for flush-mounted installation.

- Flush-mounted box dimensions (H x W x D): 331 x 311 x 103mm
- Masking frame dimensions (H x W x D): 400 x 400 x 2 mm

UEB3-1K-AE	13350003855	Smoke detector input on TRZ and Compact Control Panel 2A and LON motor nodes	
UEB3-2K7-AE	13350003856	Separate fire alarm system input on MZ3	

ZSM3 timer

Digital timer for installation in MZ3 modular control panel.

- Date-independent programming
- Date-related programming
- Pulse, cycle and random programming
- Sunrise- and sunset-related programming
- Programming via PC and mobile appliances
- Bluetooth Low Energy interface
- Operating voltage: AC 110-230 V ±10 % 50/60 Hz
- Switching capacity resistive load: 16 A /250 V AC
- Switching capacity DC: 300 mA / 60 V DC
- Shortest ON/OFF switch time: 1 min.
- Switch output: Changeover contact, potentialfree
- Switching channels: 2
- Operating temperature: -20 °C to +55 °C
- Protection category: IP 20
- Protection class: II

2.5.2 Service Port Software

For parametrisation of devices via the service port interface

Service Port Software makes it easy to configure and set the functions of products equipped with a service port interface. The service port cable connects device and PC. The software and connecting cable are needed to reset a servicing alert. The ability to adjust other functions depends on the functions of the supported devices.

Benefits/ Features

Use one software tool to set the parameters and configuration for all sorts of devices

Applications

- TRZ staircase control panels, types TRZ Plus 2A, TRZ Plus Comfort, TRZ Plus 2A/UP, TRZ Plus DG
- Compact Control Panel 2A, 4A and 8A
- SPS Compact Control Panel, WPS2 Window Protection System
- iVent/2 8A ventilation control panel

System requirements

- Microsoft Windows XP SP2 or newer
- PC with MS.Net Framework 2.01)2) runtime environment and MS Installer 33)
- At least 50 MB space on the hard drive
- CPU with at least 700 MHz frequency and 265 K cache
- One free USB port, 1.1 or higher
- PDF reader

Order information		
Service Port USB connecting cable incl. software		
Item number 3000100		

• Note: Manufacturer-specific certified proof of competence is mandatory to ensure proper handling of the Service Port Software.

2.5.3 RBH/3A SHE manual call points and accessories

Manual call point for manual activation of an SHE message

Manual control point for operating SHE control panels made by STG-BEIKIRCH.

Benefits/ **Features**

- ABS housing, flat design as per DIN 14655 for indoor installation
- Optional aluminium housing (type RBH/3A(/SU)/ALU)
- Concealed "CLOSE SHE" key
- Complete with key(s) and "Out of order" warning sign
- Optional buzzer for RBH/3A/SU and RBH/3A/SU/ALU
- "OPEN SHE" and "CLOSE SHE" function keys
- LED display: "OPEN SHE", "In operation" and "Malfunction"
- Certification based on prEN 12101-9:2004

Technical specifications

Operating voltage: 24 V DC (+15%/+25%)

Supply cable requirement: $4 \times 2 \times 0.8 \text{ mm}^2$ Dimensions (H x W x D): 125 x 125 x 36 mm -5 °C to +40 °C Ambient temperature:

IP 40 Protection category:

AG-026 electronic alarm siren

Acoustic support for SHE, SPS and/or malfunction messages.

- Particularly low current consumption (30 mA)
- Various alarm tones to choose from
- Integrated volume control
- Operating voltage: 10 V 28 V DC
- Starting current: approx. 30 mA, for 2 ms
- Supply cable requirement: 2 x 2 x 0.8 mm²
- Sound level: 80 dB-116 dB A (depending on tone)
- Protection category: IP 65
- Dimensions: 93 mm diameter x 75 mm
- Colours: Red, white

2.5.4 MSD 523 photo optical smoke detector

VdS-approved photo optical smoke detector

For use with SPS and SHE systems made by STG-BEIKIRCH. Optional MSD 523/MS complete with base.

Technical specifications

Operating voltage: 18 V DC – 30 V DC

Alert criterion: Current increase, 2-conductor technology

Monitored area: max. 120 m²
 Installation height: max. 16 m
 Perm. airspeed: max. 20 m/s
 Current consumption: idle: max. 120 µA

alert: min. 19 mA, max. 22.5 mA

■ Ambient temperature: -25 °C to +60 °C

VdS approval: G207123

Order information			
Version	MSD 523		
version	MSD 523	/MS	
Item number	20202139	62005300	

• **Note:** The maximum monitored area and installation height in the room being monitored is dependent on the roof slope and the horizontal distance between the smoke detectors as specified in EN DIN 54-7.

SRS01 ball impact protection for automatic detectors

Ball impact protection for MSD 523 photo optical smoke detectors.

- Material: Steel, nickel-plated
- Interior dimensions: 125 mm diameter, height 87 mm
- Exterior dimensions: 159 mm diameter, height 91 mm

Order information	
SF	RS01
Item number	20202214

2.5.5 NB emergency power batteries

24 V DC emergency power replacement for SHE motor control panels

For TRZ SHE control panels, Compact Control Panels 4A/8A and MZ3 modular control panels.

Benefits/ Features

- Two 12 V batteries form a 24 V DC emergency power replacement for SHE motor control panels
- Emergency power batteries for larger control panels or customised systems available on request, subject to type clarification

Versions

- **24** V/0.8 Ah NB-8E
- **24** V/1.2 Ah NB-901
- **24** V/2.2 Ah NB-902
- 24 V/3.4 Ah NB-903
- 24 V/7.2 Ah NB-907
- **24** V/12 Ah NB-910
- **24** V/18 Ah NB-915
- 24 V/26 Ah NB-926
- 24 V/40 Ah NB-940
- **Note:** All standard batteries supplied with the corresponding SHE control panels must be regularly checked! They must be replaced as part of the maintenance schedule after a specified operating time of 4 years!

SZ10 profile half-cylinder

For LTA 12 and LTA 13/AP vent switches.

- Profile half-cylinder as per DIN 18 252.
- Complete with three keys, simultaneous locking.

Order information	
S	Z10
Item number	94810900

2.5.7 Sensors

Accessories for ventilation and wind/rain detection panels

WRM/2 24V wind/rain sensor

Connects to 24 V DC SHE and ventilation control panels and 230 V AC wind/rain detection panels. Integrated electronic assessment of wind and rain alerts. Heated sensor surface, dependent on the outdoor temperature.

Optional wind pulse forwarding through separate output.

Supply voltage: 20–30 V DC

or 20-28 V AC

Power consumption: max. 110mA

Power consumption in standby: approx. 33 mA

Output potential-free changeover contact:

max. 30 V/1 A

Connections: max. 2.5 mm²
 Ambient temperature range: -20 °C to +60 °C

Supplied complete with mounting bracket.

Order information		
WRM/2 24V		
ltem number	13360000531	

RM/2 24V rain sensor

Connects to 24 V DC SHE and ventilation control panels and 230 V AC wind/rain detection panels. Integrated electronic assessment of rain alerts. Heated sensor surface, dependent on the outdoor temperature.

Supply voltage: 20-30 V DC

or 20-28 V DC

Power consumption: max. 110mA

Power consumption in standby: approx. 33 mA

Output potential-free changeover contact:

max. 30 V/1A

Connections: max. 2.5 mm²

Supplied complete with mounting bracket.

Order information	
RMA	/2 24V
Item number	13360000385

SR-400 standpipe

Standpipe for WRM/2 24V wind/rain sensor and RM/2 24V rain sensor.

Supports a favourable flow position when mounting sensors, e.g., on flat roofs.

- Dimensions (H x W x D): 1,000 x 245 x 245 mm
- Material: Plastic

Order information		
SR-400		
ltem number	21100180	

TS-1030 temperature sensor

Automatically controls the ventilation based on room temperature, for use in dry environments. +5 °C to +30 °C set point adjustment. Optional surface (AP) or flush mounting (UP).

- Switch contact: 1 x changeover
- Dimensions (H x W x D): 70 x 70 x 26 mm
- Connections: 2 x 2 x 0.8 mm² (24 V DC) 4 x 1.5 mm² incl. PE (230 V AC)

Order information

version	/AP	/UP
Item number	2500098	20402010

FS-3095 humidity sensor

Automatically controls the ventilation based on room humidity. Optional surface (AP) or flush mounting (UP).

- 30-95 % relative humidity set point adjustment
- Switch contact: 1 x changeover
- Dimensions (H x W x D): 75 x 75 x 25.5 mm
- Colour: White
- Supply cable requirement: 2 x 2 x 0.8 mm² (24 V) 4 x 1.5 mm² incl. PE (230 V)

FS-3095	
/AP	/UP
20402017	20402016
	/AP

2.5.7 Sensors

MS multi-sensor

Automatically controls the ventilation in dry rooms, based on air temperature, humidity and ${\rm CO_2}$ content in the room.

- Displays temperature, relative humidity and air quality.
- Individually adjustable switching thresholds for temperature, humidity and CO₂.
- Integrated OPEN/CLOSE vent switch.

Supply voltage: 24 V DC (-20 %/+30 %)

Current consumption: 10-50 mA at 24 V
 Operating range: 0-40 °C, 10-90 % RF, no condensation

Switching current of

potential-free switches: 0.5 A DC

Protection class: IP 20

Dimensions (H x W x D): 120 x 80 x 38 mm

Order information

Item number	13321102060	

3 Smoke and heat extraction systems

Smoke and heat extraction systems are key components of a fire protection concept. The aim must always be to guarantee the very highest levels of safety and thus the best possible protection of people and property. To ensure functional reliability over the entire life cycle, the individual components must be regularly checked – including and especially in combination with the other components of an integrated system.

VdS Schadenverhütung – the damage prevention arm of the independent German Association of Property Insurers – has tested and certified the manufacturing operations of STG-Beikirch. This certification testifies to the high standards of quality and performance that we demand of our smoke and heat extraction systems. They include our LiSE lift shaft system with building code approval (DIBt Approval No. Z-78.12-247).

Our portfolio

LiSE lift shaft smoke and heat extraction system with building code approval Detects and extracts smoke, aerates and ventilates lift shafts.

» Find out more:

3.2 LiSE lift shaft smoke and heat extraction system[©] CE and building code approval

Building code approved system for detecting and extracting smoke, and aerating and ventilating lift shafts

Energy- and cost-optimised solution that builds on the principle of point type smoke detectors. LiSE works with a closed smoked extraction aperture that only opens to provide controlled natural ventilation or smoke and heat extraction when activated manually as required, or by automatic detectors.

Benefits/ Features

- Building code approval (DIBt approval no. Z-78.12-247)
- Reliably extracts smoke from lift shafts while complying with EnEV
- Specific and controlled ventilation
- No permanent opening
- Reduces heat losses
- Considerable reduces energy consumption and CO₂ emissions in the building
- Improves the air quality in shaft and lift
- Sustainable use protects the climate and environment

Safety

- In the event of fire, evacuating people in a lift is the top priority
- Complies with all legal requirements and European standards
- Complies with Construction Products Directive, Machinery Directive, safety rules for lifts and VdS guidance sheet 2895
- Comprehensive, modular portfolio of components
- Enhances safety in the building

LiSE CE system components

Control: TRZ Plus Comfort

Modern, smart and certified controller. TRZ Plus Comfort has battery backup and controls the smoke extraction apertures and the air quality in both the shaft and the lift itself. If smoke is detected, an appropriate alert is sent to the lift controller, which takes the lift to the next stop in the direction of travel and opens the doors to let the occupants out.

Order information		
TRZ Plus Comfort o.W. / orange / LISE CE		
ltem number	13362500254	

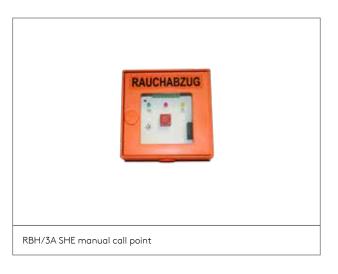

Smoke extraction aperture / Venting flap

An electromotive (24 V) louvre fan extracts the smoke and vents the lift. Venting flaps ensure both effective ventilation control and reliable smoke extraction. They prevent the uncontrolled outflow of heat and energy through permanent apertures.

Order information:

FIEGER louvre window (glass), type STG-BEIKIRCH LiSE (dimensions: $450 \times 450 \text{ mm}^2$ up to $1150 \times 1150 \text{ mm}^2$, please indicate required dimensions).

Manual activation: RBH/3A SHE manual call point

To enhance the continuous monitoring of the lift shaft, it must be possible to trigger an alarm near the main access point and activate smoke extraction

The RBH/3A SHE manual call point displays whether smoke extraction is operational, a malfunction has occurred or an alarm has been triggered.

Order information		
RBH/3A/orange		
Item number	60000301	

LiSE CE system components

Smoke detection: MSD 523-E smoke detector

The point type smoke detectors in the lift shaft automatically detect smoke as specified in EN 54-7 and VdS 2504.

MSD 523-E was designed specifically for use in lift shafts. It ensures active early detection of fires in lift shafts.

Special version with base.

Order information							
MSD 523-E							
Item number	62005400						

Ventilation: MS multi-sensor

When smoke extractors as per EnEV are closed, lift shafts must be ventilated. Automatic ventilation is preferred to ensure the exchange of air based on CO_2 content, temperature and, if appropriate, humidity.

MS multi-sensor measures and displays air temperature, humidity and CO_2 concentration. The threshold levels driving ventilation control can be adjusted. If a measurement is higher or lower than a specific setting, the SHE system connected via potential-free contacts opens or closes.

MS multi-sensor							
13321102060							

Ventilation: TS-1030 temperature sensor

Automatically controls the ventilation based on room temperature, for use in dry environments. +5 °C to +30 °C set point adjustment. Optional surface (AP) or flush mounting (UP).

- Switch contact: 1x changeover
- Dimensions (H x W x D): 70 x 70 x 26 mm
- Connections: 2 x 2 x 0.8 mm² (24 V DC)
 4 x 1.5 mm² incl. PE (230 V AC)

Order information

Item number	2500098 20402010					

LiSE CE system components

Ventilation: WRM/2 24V wind/rain sensor Automatic ventilation configurations must include a WRM/2 24V wind/rain sensor to ensure windows and flaps are not accidentally opened in bad weather.

Order information							
WRM/2 24V							
Item number	13360000531						

■ **Note:** An extensive range of accessories can be used to extend the system, e.g. various control units and switches, see Section 2.5.

4 Planning aids

Detailed engineering

In addition to our data sheets, we have compiled complex engineering aids to help you plan the widest range of projects to your individual requirements.

Our planning aids

- Installation examples
- Load-displacement diagrams for chain drives
- Wind loads
- Snow loads
- Cable length diagrams
- Cable diameter determination
- Synchronous control selection table
- Sample wiring plans (staircase control panel, SHE motor control panel)
- Connection examples (SHE/ventilation controllers)

» Find out more:

If you would like to learn more about our products and services, please go to www.stg-beikirch.de.

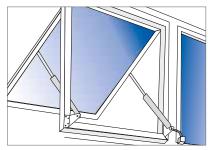

4.1 Mounting examples on sashes and flaps

1) Tandem or synchronous operation

4.2 Chain drive load-displacement diagrams

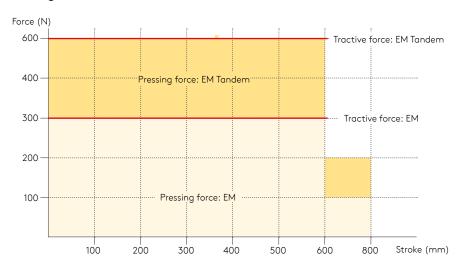

Load-displacement diagram: LM chain drive series

Load-displacement diagram: CDi chain drive series

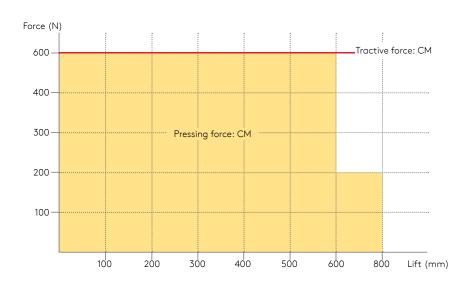

Load-displacement diagram: EM chain drive series

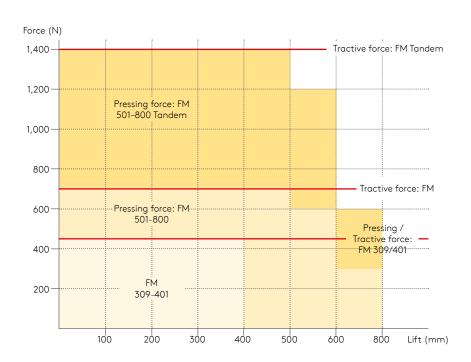

Load-displacement diagram: CM chain drive series

Load-displacement diagram: FM chain drive series

4.3 Wind load table as per EN 1991-1-4

Wind zone	u _{ref}	q _{ref}
1	22.5 m/s	0.32 kN/m²
2	25.0 m/s	0.39 kN/m²
3	27.5 m/s	0.47 kN/m²
4	30.0 m/s	0.56 kN/m²

The wind zone chart indicates time-averaged wind speeds (u_{ref}) with their associated speed pressures (q_{ref}).

The speed (u_{ref}) applies at a height of 10 m above ground level on flat, open terrain, category II.

Terrain category II:

Terrain with hedges, occasional farms, houses or trees, agricultural region.

 Note: Detailed analysis requires consideration of EN 1991-1-4 in its entirety.

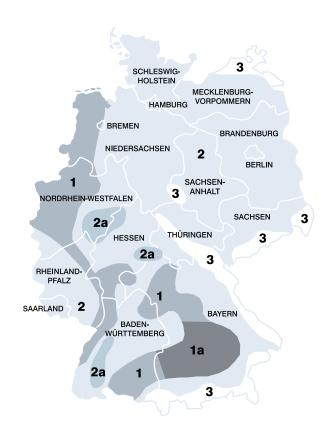

Idealised wind load chart, original charts can be found in EN 1991-1-4.

Simplified speed pressures for structures up to 25 m in height

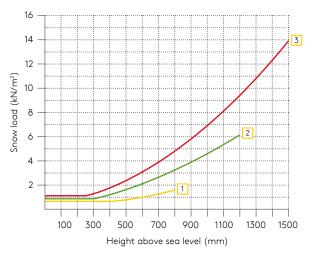

Wind zone	Speed pressure q in kN/m² at a building height h within the boundar						
		h ≤ 10 m	10 m < h ≤ 18 m	18m < h ≤ 25m			
1	Inland	0.50	0.65	0.75			
2	Inland	0.65	0.80	0.90			
2	Baltic Sea coast and islands	0.85	1.00	1.10			
3	Inland	0.80	0.95	1.10			
<u>5</u>	Baltic Sea coast and islands	1.05	1.20	1.30			
	Inland	0.95	1.15	1.30			
4	North Sea and Baltic Sea coast and Baltic Sea islands	1.25	1.40	1.55			
	North Sea islands	1.40	-	-			

4.4 Snow load table as per EN 1991-1-3

	Zone	Base amounts (minimum values)
1	Zone 1	0.65 kN/m² (up to 400 m above sea level)
	Zone 1a	Zone 1 x 1.25
2	Zone 2	0.85 kN/m² (up to 285m above sea level)
2	Zone 2a	Zone 2 x 1.25
3	Zone 3	1.10 kN/m² (up to 255m above sea level)

Idealised snow load chart, original charts can be found in EN 1991-1-3.

• Note: Detailed analysis requires consideration of EN 1991-1-3 in its entirety.

Snow load reduction factors as per EN 1991-1-3 (extracts)

 $F_s = S_K \times \mu_i$

 F_S = Snow load S_K = characteristic snow load in kN/m²

 μ_i = largest snow load coefficient

Snow load diagram for pitched roofs (extract)

Snow load diagram for monopitch and shed roofs (extract)

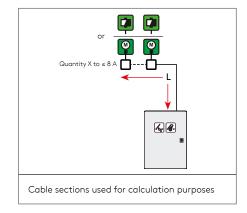

4.5 Cable length diagram, cable length determination

Help with determining the maximum cable length, depending on the cable diameter and rated currents of the drives

Formula for calculating cable lengths

$$L(I) = \frac{A_L \times U}{2 \times x I^{-1}} \qquad [m] ([A]) = \frac{[mm^2] \times [V]}{\left[\frac{\Omega \times mm^2}{m}\right] \times [A]}$$

1) Since the formula already considers both outward and return cable conductors, only the single cable length needs to be entered.

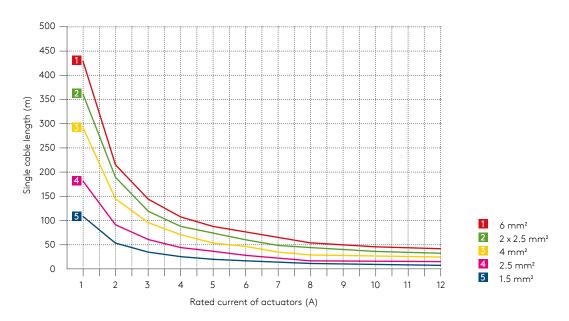

Definition	Dimension symbol	Unit character
Cable diameter	A	mm²
Specific resistance	ρ	(Ω x mm²)/m
Cable length	L	m
Amperage	I	A
Voltage	U	V

[Unit equation]

Permissible loss of voltage over the length of cable: 2.5 V. Specific resistance of copper (electric cable): 0.0175 ($\Omega \times mm^2$)/m.

Cable length diagram

To determine the permissible cable length, depending on the cable diameter and total rated current of the actuators.

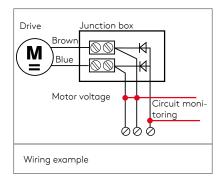

Cable diameter table

		Cable dia	ımeter A [mm²]		
	1.5 mm²	2.5 mm²	4 mm²	2 x 2.5 mm²	6 mm²
Current I [A]			Cable length L [m]		
1	107	179	286	357	429
2	54	89	143	179	234

[•] Note: When calculating cable diameters for the actuators, bear in mind the current surges on start-up.

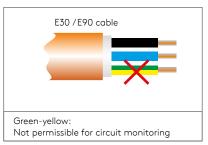

Notes on cable selection

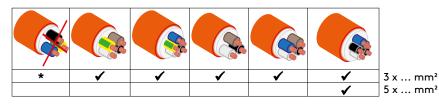

3 or 5 cores (duplicated layout) are required for the supply cables to the SHE drive motors. Two (4) cores are for the motor voltage, the 3rd or 5th core is used to monitor the circuit.

Cable selection and wiring must comply with the (Model) Conduit Systems Directive (in German: MLAR).

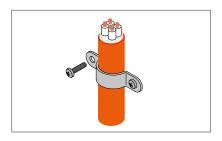

Retaining E30 or E90 functional reliability is particularly important!

Examples for possible cable types and fastenings

* Only suitable for TRZ SHE control panel with 2-wire circuit monitoring, see technical literature for TRZ.

Cable system, consisting of load support system and cables with appropriately fire-resistance-tested plugs and screws.

Cable system as per DIN 4102-12 Safety cable + laying system

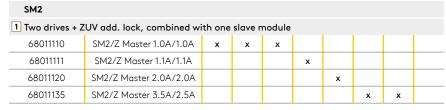

4.6 Selection matrix for synchronous control

This matrix helps select synchronous modules for sashes, primarily with more than two drives.

4.7 Sample wiring plans (TRZ, MZ3, ...)

Sample wiring plan for staircase SHE

Notes:

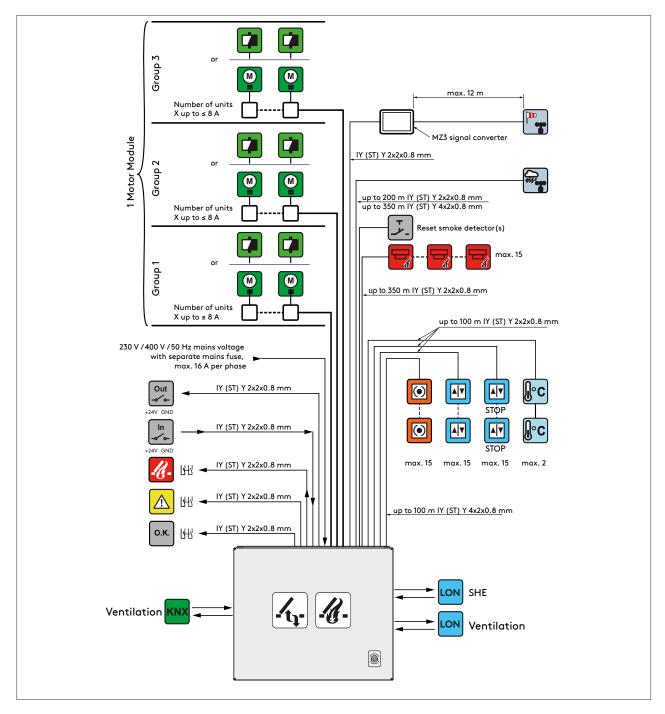

- We recommend installing an automatic detector on each floor of the staircase.
- SHE functions always take precedence over ventilation functions.
- Cable selection and wiring must comply with the (Model) Conduit Systems Directive (in German: MLAR).
- Retaining E30 (30 min.) or E90 (90 min.) functional reliability is particularly important!
- All cables leading to the control panel (apart from the mains cable) carry 24 V DC and must be laid separately from the mains cable.
- Compliance with the relevant VDE regulations governing cable installation is mandatory.
- Do not use cable diameters that are smaller than the specified sizes. They are specified for an ambient temperature of 20 °C.
- Compliance with the cable manufacturer's specifications governing installation and wiring is mandatory.

MZ3 sample wiring plan

Compliance with applicable specifications governing cable installation with retention of functional reliability for 30 min. or 90 min. is mandatory. Any deviations must be agreed with the construction manager, the local authorities responsible for approving the installation, the energy utility companies, fire prevention authorities or trade association. Do not use cable diameters that are smaller than the specified sizes. They are specified for an ambient temperature of 20 °C. Use larger diameters for higher temperatures. In the case of E90 (E30), the cable diameters must be adjusted in compliance with the manufacturer's specifications. All cables leading to the control centre (apart from the mains cable) carry 24 V DC and must be laid separately from the mains cable. Compliance with the relevant VDE regulations governing cable installation is mandatory.

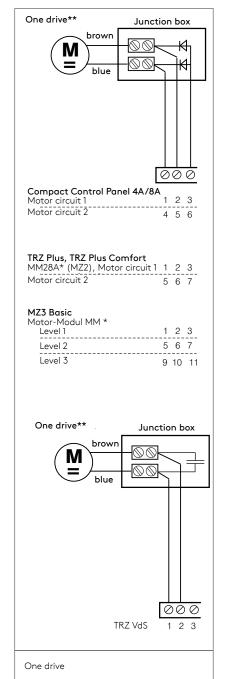

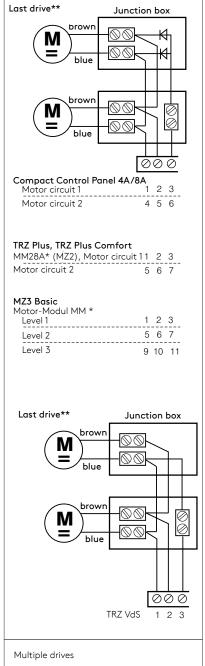

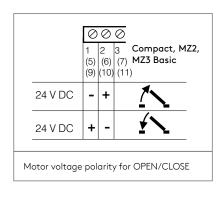

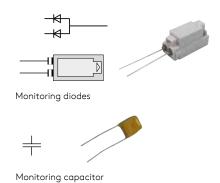

4.8 Sample connection diagrams

Connection diagram: 24 V DC drive - control panel

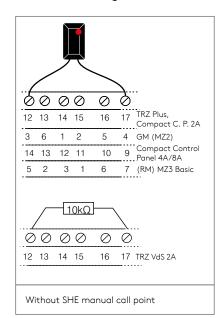

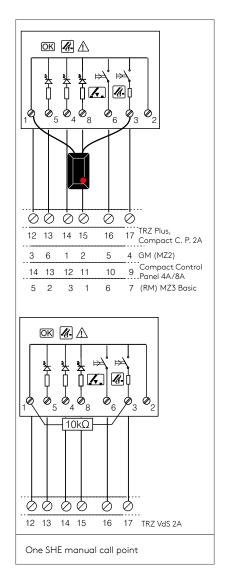

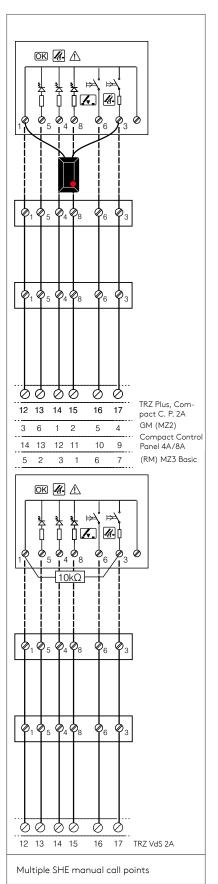

- * Functional scope is dictated by the configuration of the MZ2/MZ3.
- ** With integrated max. load or end cutoff.

Connection diagram: RBH/3A SHE manual call point - control panel

Notes:

■ General:

Make sure all systems are disconnected from the mains (230 V AC/400 V AC) and all batteries are disconnected before performing any work.

■ Connection:

Feed the connecting cables into the control panel housing. Connect the cables to the terminals as per diagram. Make sure the connections are correct! If the system runs in the wrong direction, swap the wires!

■ Malfunctions:

Incorrect terminal assignment or number/colour mistakes can cause the control panel or external units to malfunction.

Operating instructions:

These connection diagrams are not designed to replace the individual operating instructions. Always read and follow the installation specifications in the technical literature!

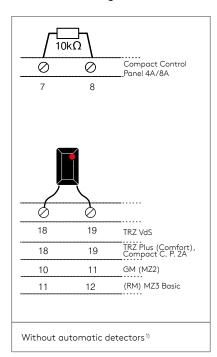

Active end module

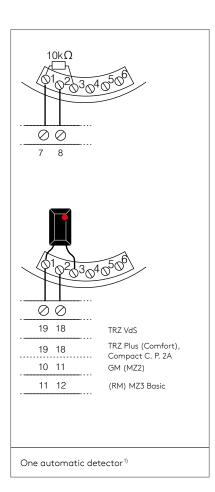

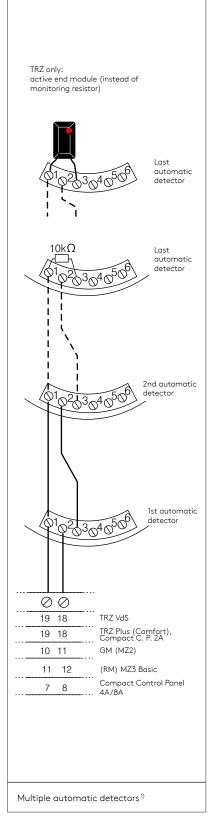

Monitoring resistor

Connection diagram: Automatic detector - control panel

Notes:

■ General:

Make sure all systems are disconnected from the mains (230 V AC/400 V AC) and all batteries are disconnected before performing any work.

■ Connection:

Feed the connecting cables into the control panel housing. Connect the cables to the terminals as per diagram. Make sure the connections are correct! If the system runs in the wrong direction, swap the wires!

■ Malfunctions:

Incorrect terminal assignment or number/colour mistakes can cause the control panel or external units to malfunction.

Operating instructions:

These connection diagrams are not designed to replace the individual operating instructions. Always read and follow the installation specifications in the technical literature!

Active end module

Monitoring resistor

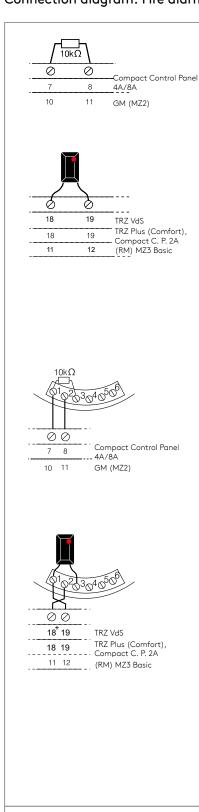

Applicable for detector types SSD 521, UTD 521, UTD 523, MSD 523 and MSD 523-E.

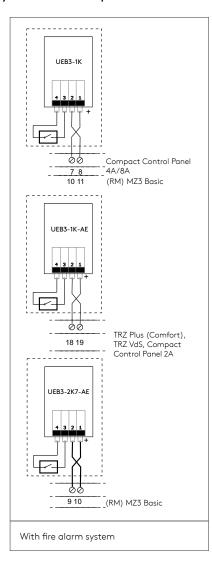

Functional scope is dictated by the configuration of the MZ2/MZ3.

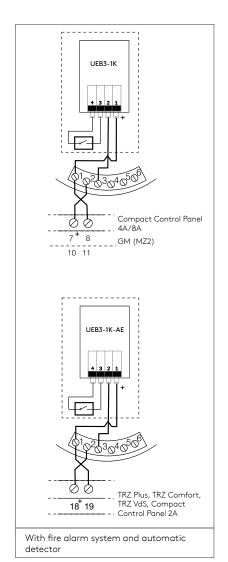

^{**} Polarity is irrelevant for installation.

Connection diagram: Fire alarm system – control panel

UEB3-1K monitoring module

UEB3-1K-AE monitoring module

UEB3-2K7-AE monitoring module

Active end module/2 **

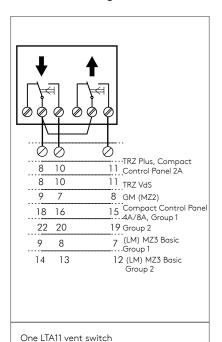

Monitoring resistor

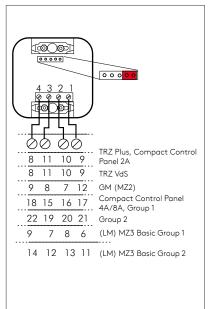

Without fire alarm system

 $^{^{\}star}$ Functional scope is dictated by the configuration of the MZ2/MZ3. ** Polarity is irrelevant for installation.

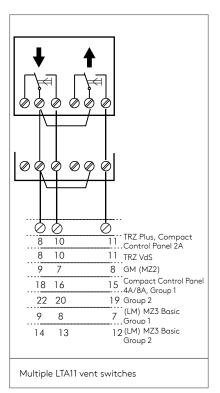

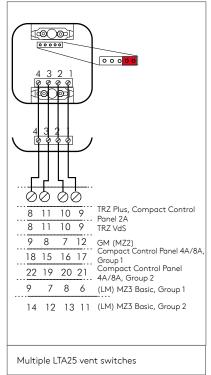

Connection diagram: LTA11 and LTA25 vent switches - control panel

One LTA25 vent switch

Notes:

■ General:

Make sure all systems are disconnected from the mains (230 V AC/400 V AC) and all batteries are disconnected before performing any work.

■ Connection:

Feed the connecting cables into the control panel housing. Connect the cables to the terminals as per diagram. Make sure the connections are correct! If the system runs in the wrong direction, swap the wires!

■ Malfunctions:

Incorrect terminal assignment or number/colour mistakes can cause the control centre or external units to malfunction.

Operating instructions:

These connection diagrams are not designed to replace the individual operating instructions. Always read and follow the installation specifications in the technical literature!

Jumper (on the back of the LTA25)

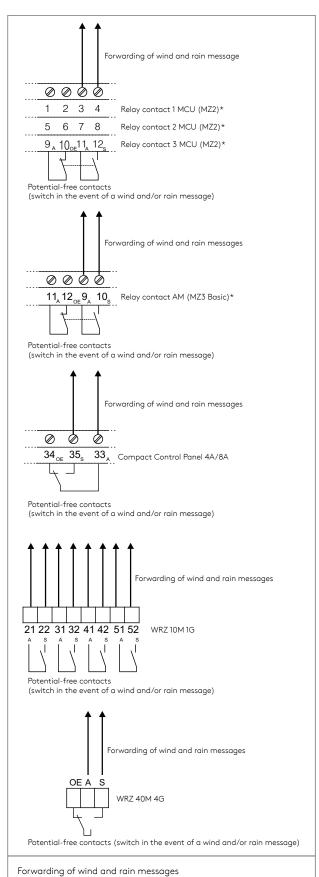

TRZ Plus Compact Control Panel 2A TRZ VdS GM (MZ2) LM3G (MZ2) Compact Control Panel 4A/8A (LM) MZ3 Basic

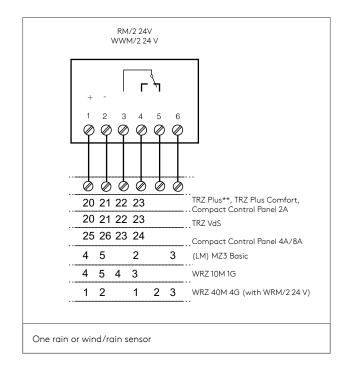

Functional scope is dictated by the configuration of the MZ2/MZ3.

Connection diagram: WRM/2 and RM/2 wind and/or rain sensor - control panel

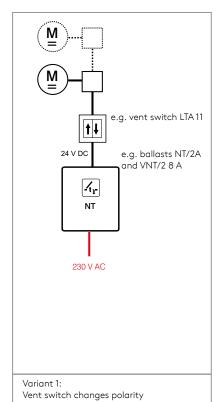

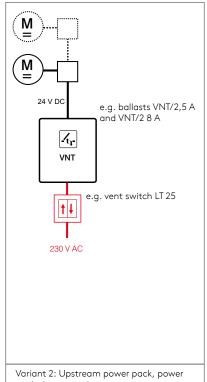

^{*} Functional scope is dictated by the configuration of the MZ2/MZ3.
** Only possible with additional TRZ/WRMAS-Basic module.

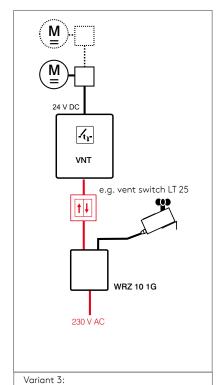

Application examples and upstream power pack variants

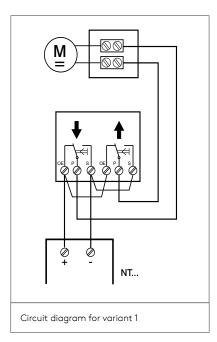

pack changes polarity

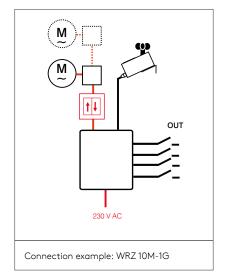

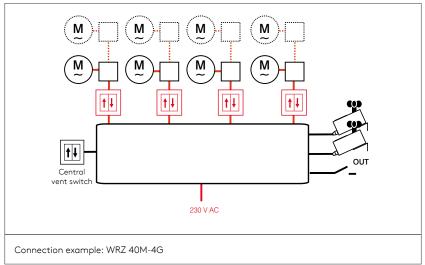

Upstream power pack without wind/rain input, power pack changes polarity, automatically closes upon receipt of a wind/rain message

WRZ10M-1G and WRZ40M-4G wind/rain sensors control the 230 V drive

Notes:

■ General:

Make sure all systems are disconnected from the mains (230 V AC/ 400 V AC) and all batteries are disconnected before performing any work.

■ Connection:

Feed the connecting cables into the control panel housing. Connect the cables to the terminals as per diagram. Make sure the connections are correct! If the system runs in the wrong direction, swap the wires!

■ Malfunctions:

Incorrect terminal assignment or number/colour mistakes can cause the control panel or external units to malfunction.

Operating instructions:

These connection diagrams are not designed to replace the individual operating instructions. Always read and follow the installation specifications in the technical literature!

Tested quality

Because we manufacture our products in-house, they are already developed here in accordance with the highest standards. Extensive and independent controls, tests and inspections confirm the outstanding quality.

Our partners in cooperation

Close cooperation with the various associations is particularly important to us. Together with them, we develop innovative solutions with which we are already tackling the challenges of the future.
